1	**User Type**	**Product**	**Module**	**Feature**	**Description**	**UX Description**	**Touchpoints**	**Maestro Trigger Signal**
8	Guest Host Verified Guest Member Elite Icon	Maestro	Reminder	**Pre-Event Concierge & Reminder**	For users with confirmed bookings or RSVPs, Maestro sends a personalised pre-event briefing in the hours before the event. This briefing surfaces practical information (door time, what to expect) alongside social context (who else is going from the user's network) and optional upsells (table upgrade, ticket for a friend). Maestro also monitors users who RSVP'd or saved an event but have not completed a booking. As event time approaches, it sends a soft re-engagement nudge to convert intent into action.	- Event name, venue, time, and door instructions - 'X of your friends are confirmed going' (social proof) - Personalised tip: dress code, parking, best time to arrive - Optional: 'Add a friend to your booking' CTA - Optional: 'Upgrade your table' if a higher-tier table is available Re-engagement nudge (saved / RSVP'd but not booked): Fires 24 hours before the event: - 'Tonight's event at VOLT is filling up — you saved this 3 days ago. Want to secure your spot?' - CTA: 'Book Now' or 'Remind me later' Push notification variant (off-app): Single line: 'Your night at VOLT starts in 3 hours. Maestro has a briefing ready for you.' — deep links into concierge panel.	Home screen Maestro orb pulse (in-app, pre-event) Full Maestro concierge panel (pre-event briefing) Push notification (off-app re-engagement) Booking confirmation screen (upgrade CTA inline)	Pre-event briefing fires when: • User has a confirmed booking OR confirmed RSVP • Current time is T-minus 2–4 hours before event start • User has not already opened the briefing this session Re-engagement nudge fires when: • User has saved or RSVP'd to an event • No booking confirmed • Current time is T-minus 24 hours before event start • tickets / tables still available for the event Suppression: One nudge per event per user. Respects user's notification preferences. Does not fire for past events.
9	Guest Host Verified Guest Member Elite Icon	Maestro	Check-in	**Morning After Recap**	After a user attends an event (verified via check-in or payment activity), Maestro generates a personalised Morning After Recap. This is a lightweight post-event summary that acknowledges the night, surfaces the digital receipt, and offers contextual next steps, from rating the venue to saving the next event. The recap reinforces habit formation: users who see the loop (go out → recap → discover next event) are more likely to book again through TAPPD.	Recap content (accessible via Maestro orb the morning after): - 'Good morning [Name]. Looks like it was a good night at [Venue].' - Spend summary: total spent, split breakdown (if applicable) - Social: 'You and 2 friends attended. Tag your photos?' - Rating prompt: 'How was [Venue]? Rate your experience' - Vibe Index update: '+12 Vibe Points earned last night' - Discovery nudge: 'The same crew is heading to XOYO next Friday — want to join?' Delivery: Push notification the morning after (9–11am): 'Your night at VOLT is summarised. Morning, [Name].' In-app: Maestro orb on the home screen shows a subtle 'recap ready' indicator (small dot). Tapping opens the recap panel.	Home screen Maestro orb (recap ready indicator) Full Maestro concierge panel (recap content) Push notification (morning after delivery) Vibe Index (Vibe Points awarded here) Digital Receipt (linked from recap)	TRIGGER SIGNAL: Post-Attendance Morning Window Fires when ALL of the following are true: • User attended an event and checked in OR payment has been processed at venue • Current time is between 09:00 – 11:00 the morning after the event • User has not already opened the recap Fallback: If user does not open the push by 11:00, Maestro orb shows a quiet dot indicator for 48 hours. Suppression: One recap per attended event per user. Does not fire for events the user did not attend.
10	Guest Host Verified Guest Venue Verified Venue Member Elite Icon	Maestro	Personalisation & Settings	**Maestro Frequency & Personalisation Controls**	Users can control how often and in what contexts Maestro surfaces proactive suggestions. This settings module lives within the main app settings and is accessible directly from any Maestro interaction via a 'Tune Maestro' option. Giving users control over Maestro's frequency is essential to maintaining trust. An opt-out is always available, Maestro shifts to user-initiated only mode if the user prefers.	Settings options: Proactive suggestions: ON / OFF (default ON) If OFF: Maestro only responds when the user taps the orb Suggestion frequency: - Subtle (max 1 nudge per 3 sessions) - Standard (max 1 nudge per session) [default] - Active (up to 2 nudges per session, higher personalisation) Contexts to enable/disable: ☑ While browsing events ☑ While selecting a table ☑ Before confirmed events ☑ Morning after recap ☑ During payment / checkout Reset Vibe Calibration: Restart the onboarding concierge to recalibrate preferences. Data used by Maestro: Link to privacy explanation (what signals Maestro reads).	App Settings → Maestro section In-session 'Tune Maestro' option on any nudge 'Don't suggest again' quick-dismiss on nudge pill	No proactive trigger for this feature. Settings are accessed user-initiated only. Exception: After a user dismisses 3+ Maestro nudges in a single session, Maestro surfaces a one-time prompt: 'Looks like my suggestions aren't landing. Want to recalibrate your vibes?' → CTA: 'Tune Maestro' (opens settings) TRIGGER: Dissmissed more than 6 times in one session (once per 30 days).
11	Guest Host Verified Guest Member Elite Icon	Maestro	Booking / Table Reservation	**Table Selection Assistant**	When a user is on the venue floor plan / table booking screen and shows signs of hesitation or indecision, Maestro steps in with a contextual inline nudge to help them understand the difference between tables and make a confident choice. This is the most precise and highest-converting Maestro trigger it fires at the moment of highest purchase intent, removing friction just before the decision.	A small card slides up from the bottom of the floor plan screen (does not replace the screen). The card shows the Maestro orb + a context-aware message: Example messages: - 'Tables V1 and V3 are both available and similar in price. V1 is closer to the stage — ideal for a livelier night.' - 'You've been looking at VIP tables. Min spend is £600 — that covers around 3 bottles for your group.' - 'Main floor tables sell out faster on Fridays. Only 3 left tonight.' Card actions: - 'Show me V1' → highlights table on floor plan - 'Compare tables' → opens comparison view - 'I'll decide myself' → dismisses Maestro card If user taps the Maestro orb while on this screen: Full concierge panel opens with 3–5 curated table recommendations ranked by fit to user's group size, spend history, and vibe preferences	Inline slide-up card on floor plan screen Highlighted table on 3D floor plan (on suggestion tap) Full Maestro panel (on orb tap or 'Compare tables') Table comparison modal (optional deep-dive)	TRIGGER SIGNAL: Table Selection Hesitation Fires when ANY of the following are true: • User taps 3+ different tables on the floor plan within 30 seconds without confirming a selection • User taps a table, views details, navigates back to floor plan, and repeats this cycle 2+ times • User has been on the floor plan screen for > 45 seconds with no table confirmed • User changes their guest count 2+ times mid-session • User clicks on specially designated area for Maestro to ask for guidence Suppression: Once per booking session. Dismissed via 'I'll decide myself'. Does not fire if user has already confirmed a table selection.
