

A retrospective document introducing Zeplin as a new addition to the design workflow

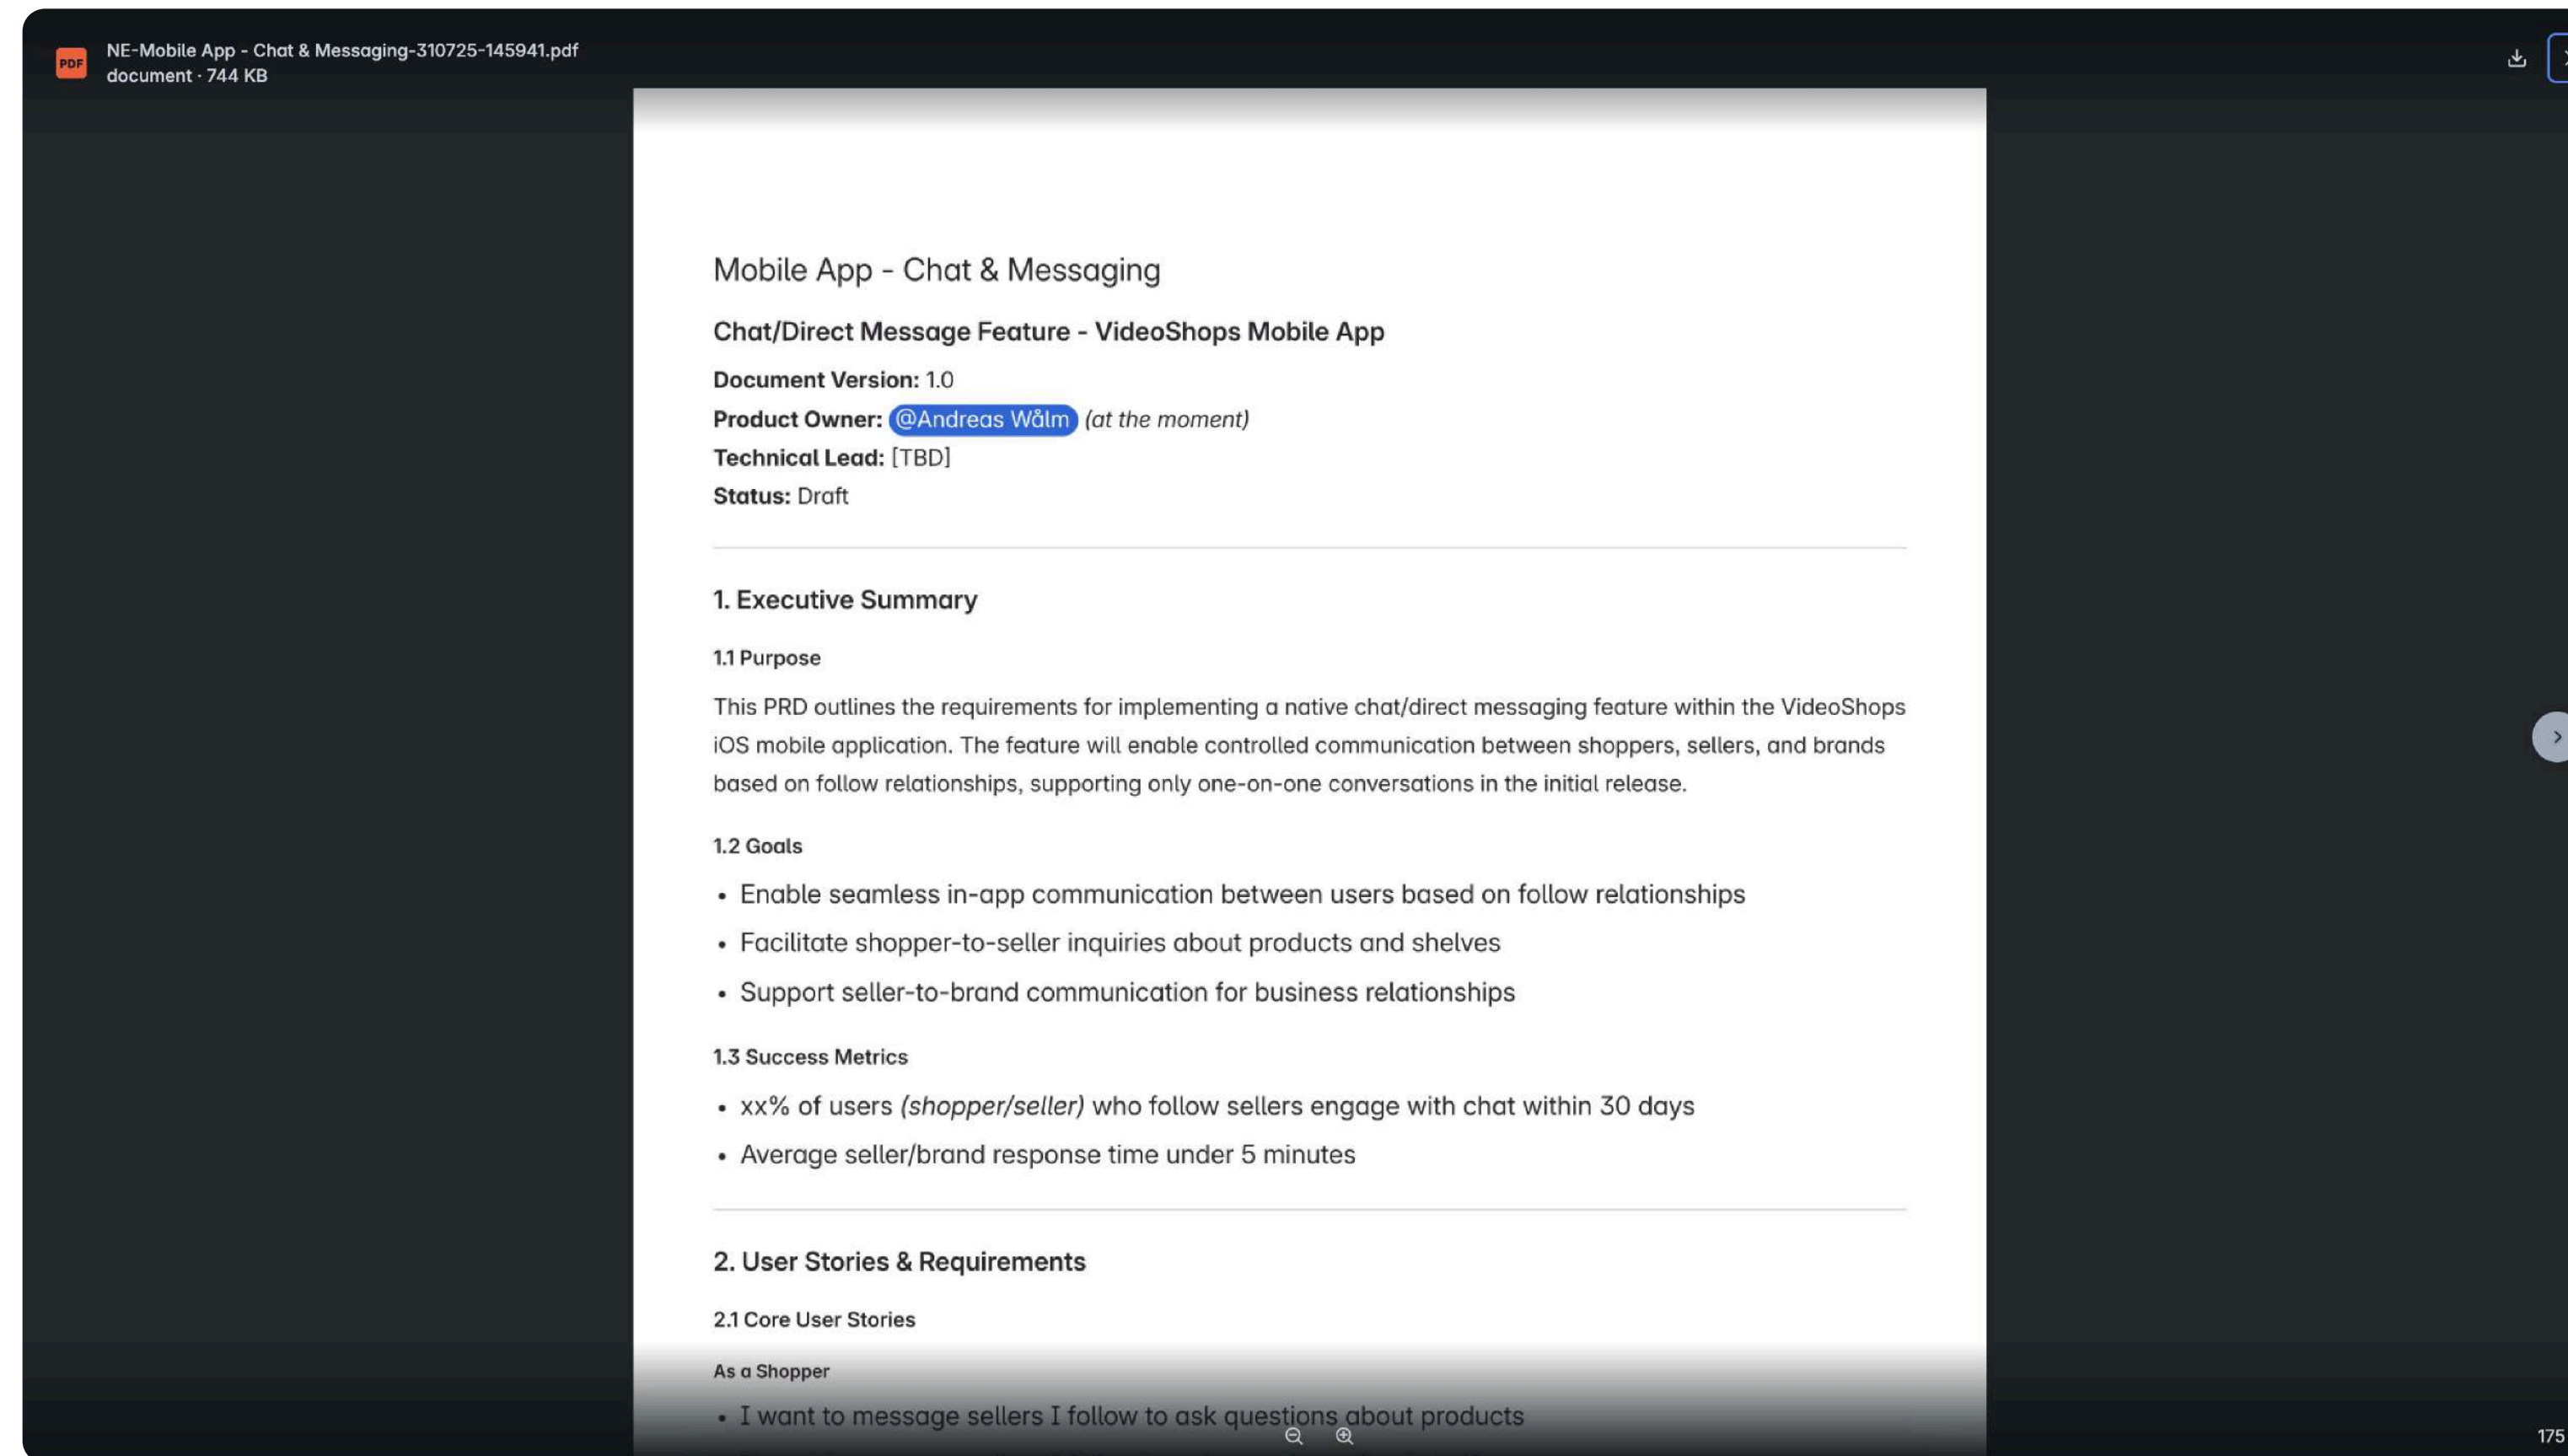

Covering

- *Discovery and Definition State
(Product Requests and Management)*
- *Design and Development Phases*
- *Delivery Phase (Zeplin Introduced)*

<https://nowwith.atlassian.net/jira/software/projects/VD/boards/80?selectedIssue=VD-169>

Discovery and Definition State (Product Requests and Management)

1. PRD DOCUMENT

Chat/Direct Message Features PRD by Andreas Wålm

When a feature is requested, the management team develops a Product Requirements Document (PRD) that outlines scope, objectives, business needs, success metrics, and comprehensive technical specifications for full implementation.

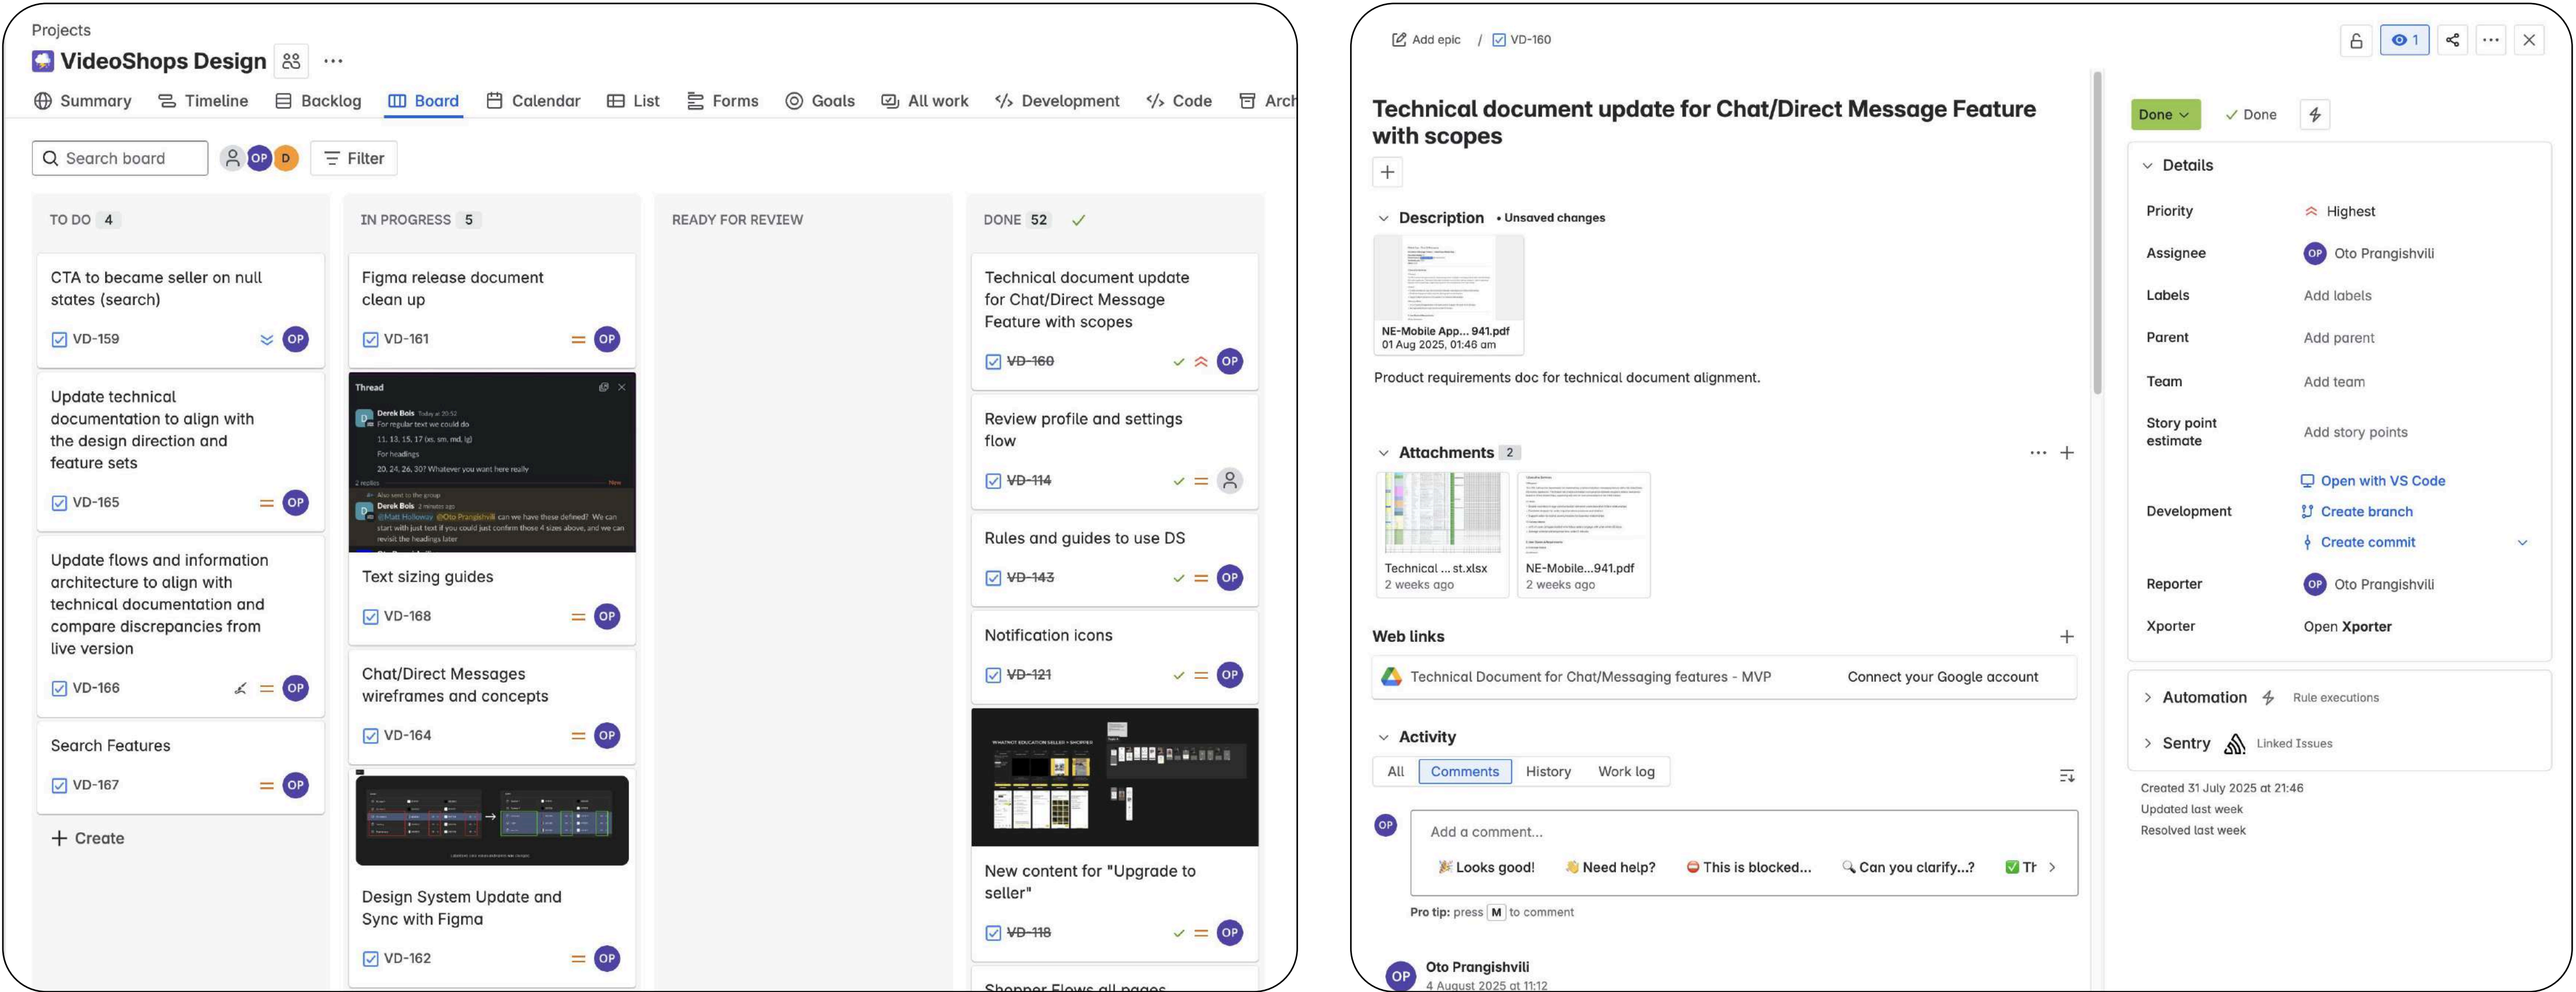

2. TECHNICAL DOCUMENT

Technical Document for Videoshops										
File Edit View Insert Format Data Tools Extensions Help										
Menus 100% 123 Roboto 10 B I A										
A1 USER TYPE										
Chat_Messaging										
1	USER TYPE	SCOPE	PRODUCT NAME	MODULE NAME	FEATURE	DESCRIPTION	UX DESCRIPTION	PLATF ORM	DATE	STATE
2	Seller/Brand	Scope 1	Messaging	Chat	Account to account realtime messaging	Ability to communicate with accounts directly with messaging/chat options	Based on Product requirements doc for technical document alignment https://nowwith.atlassian.net/jira/software/projects/VD/boards/80?selectedIssue=VD-160	Mobile/Web	08.01.25	Confirmed
3	Seller/Brand	Scope 1	Messaging	Chat	Message Brands & Sellers	Sellers can message brands or other sellers they follow	Accessed via New Chat screen or from recipients shop	Mobile/Web	08.01.25	Confirmed
4	Brand	Scope 1	Messaging	Chat	Reply to Seller	Brands can reply to seller messages	Managed through web interface. Brands see chat list, avatars, and timestamps.	Mobile/Web	08.01.25	Confirmed
5	Seller/Brand	Scope 1	Messaging	Chat	Chat Entry Point	Users can access chat from "My Shop" screen	Chat icon or section visible on "My Shop". Unread message count badge shown. User can initiate direct conversation from another sellers/brands page.	Mobile/Web	08.01.25	Confirmed
6	Seller/Brand	Scope 1	Messaging	Chat	Chat List	Show all active chats sorted by last message	Includes shop name, avatar, user type badge, last message preview, relative timestamp, and unread indicator. Sellers see tabs: Sellers / Brands. Search supported. Empty state shown if no matches. Conversation module is initiated when clicked on user or brand.	Mobile/Web	08.01.25	Confirmed
7	Seller/Brand	Scope 1	Messaging	Chat	Search user to chat	Search user to initiate chat. (from my following list) search by name	Show user id and avatar, last message preview, relative timestamp, and unread indicator. If first time display message: Start conversation with this user.	Mobile/Web	08.01.25	Confirmed
8	Seller/Brand	Scope 1	Messaging	Chat	Follow Validation	Prevent chat initiation if user doesn't follow recipient	On attempt, show message: "To start a chat, you must follow this user."	Mobile/Web	08.01.25	Confirmed
9	Seller/Brand	Scope 1	Messaging	Conversation Module	Display user profile data	User should see with whom they are having conversation	Display short information about user communicating via chat: Name (shop name in case of merchant user), Avatar/profile pic	Mobile/Web	08.01.25	Confirmed
10	Seller/Brand	Scope 1	Messaging	Conversation Module	Send Text Message	Supports plain text messages (max 1000 characters)	Input field at bottom, send button activates only with text, character counter appears at 900+. Input field should match the comment section UI/UX pattern.	Mobile/Web	08.01.25	Confirmed
11	Seller/Brand	Scope 1	Messaging	Conversation Module	Message Bubbles	Display chat messages with alignment and metadata	Right-aligned for sender, left for receiver. Timestamp, avatar, and read/sent indicators shown.	Mobile/Web	08.01.25	Confirmed
12	Seller/Brand	Scope 1	Messaging	Conversation Module	Delete Message	Users can soft-delete their own messages	Long press > delete. Placeholder "This message was deleted" shown in place of deleted message.	Mobile/Web	08.01.25	Confirmed

https://docs.google.com/spreadsheets/d/1jJgYJvCVuj-bYzgLuDPOaIEZQV8BwR_PNNExAljQPDk/edit?gid=1891945148#gid=1891945148

Design and development teams collaboratively review requested features using the PRD as a foundation, defining scope, modules, and feature sets to schedule development stage.

3. JIRA

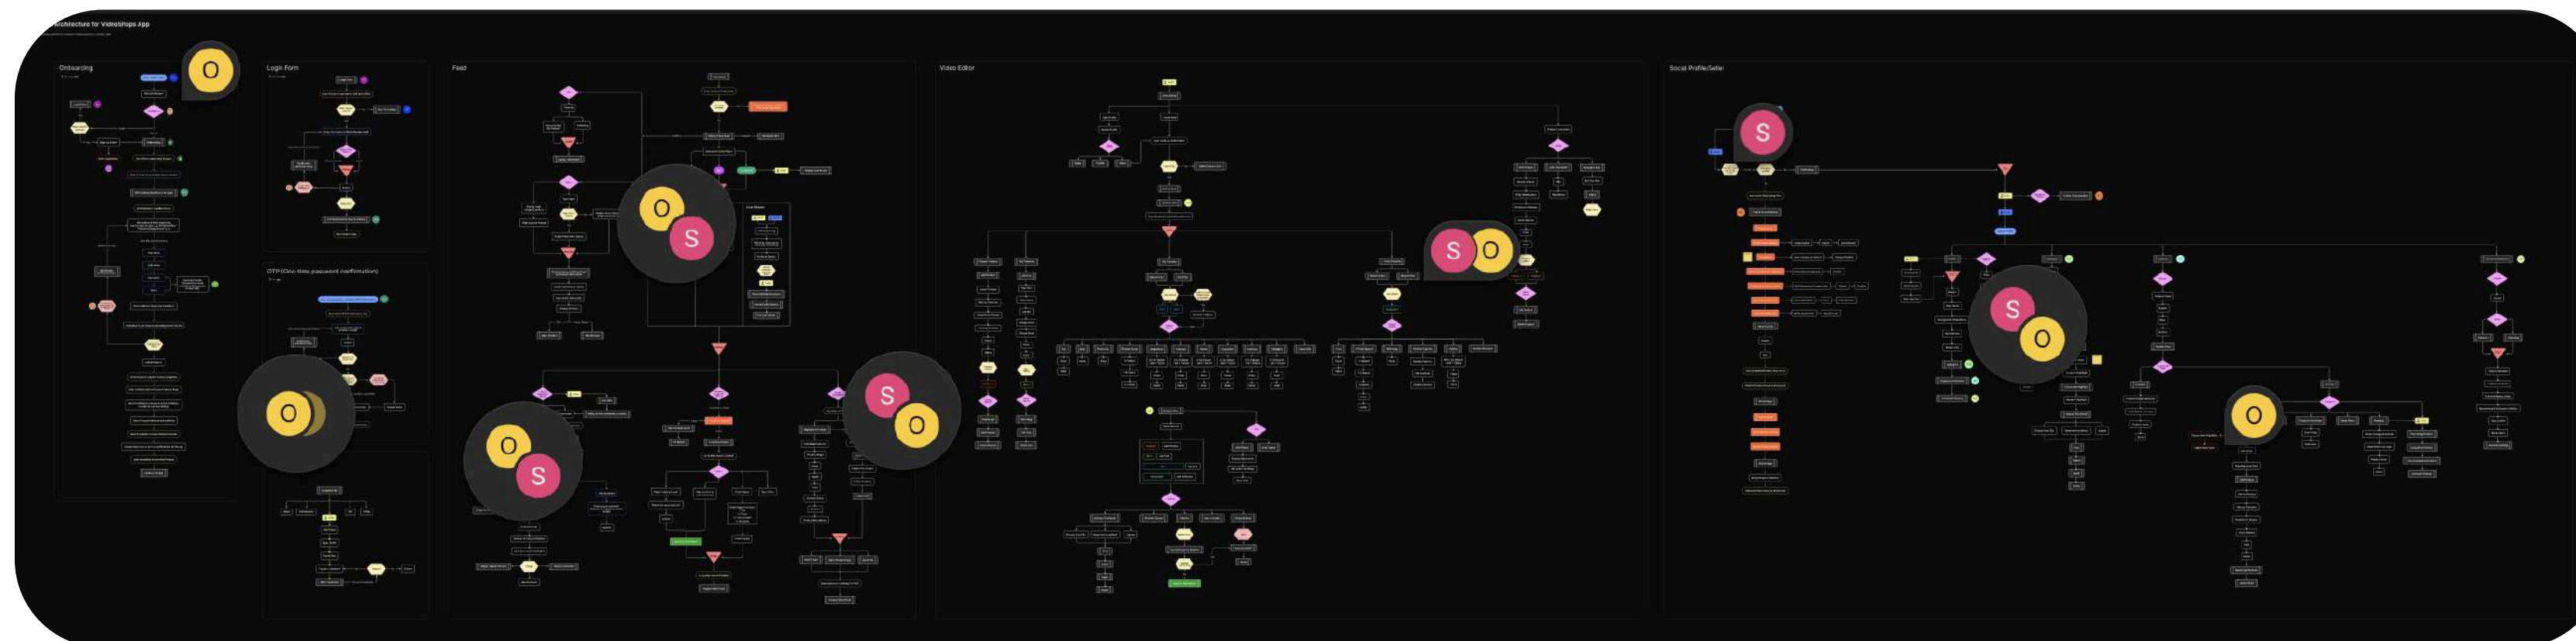

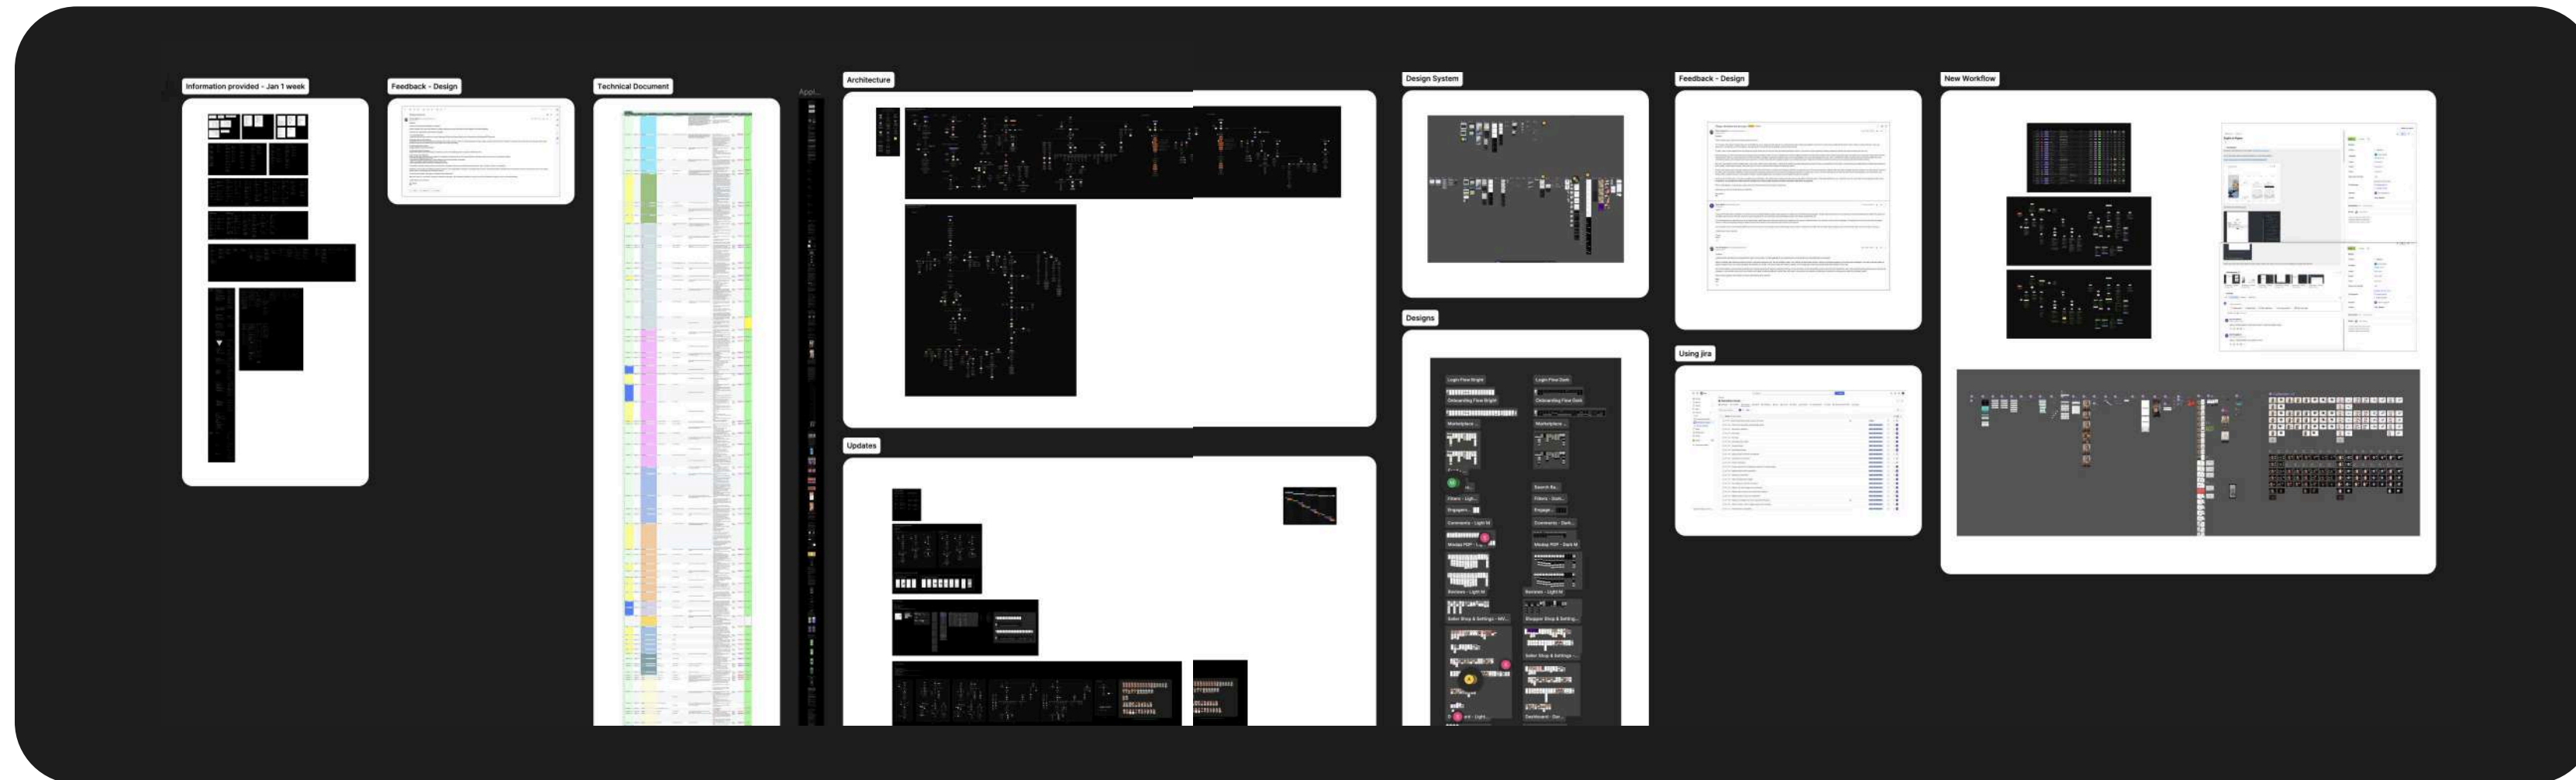

<https://nowwith.atlassian.net/jira/software/projects/VD/boards/80>

Jira serves as the central system for documenting and managing all work items, requests, and scheduled activities.

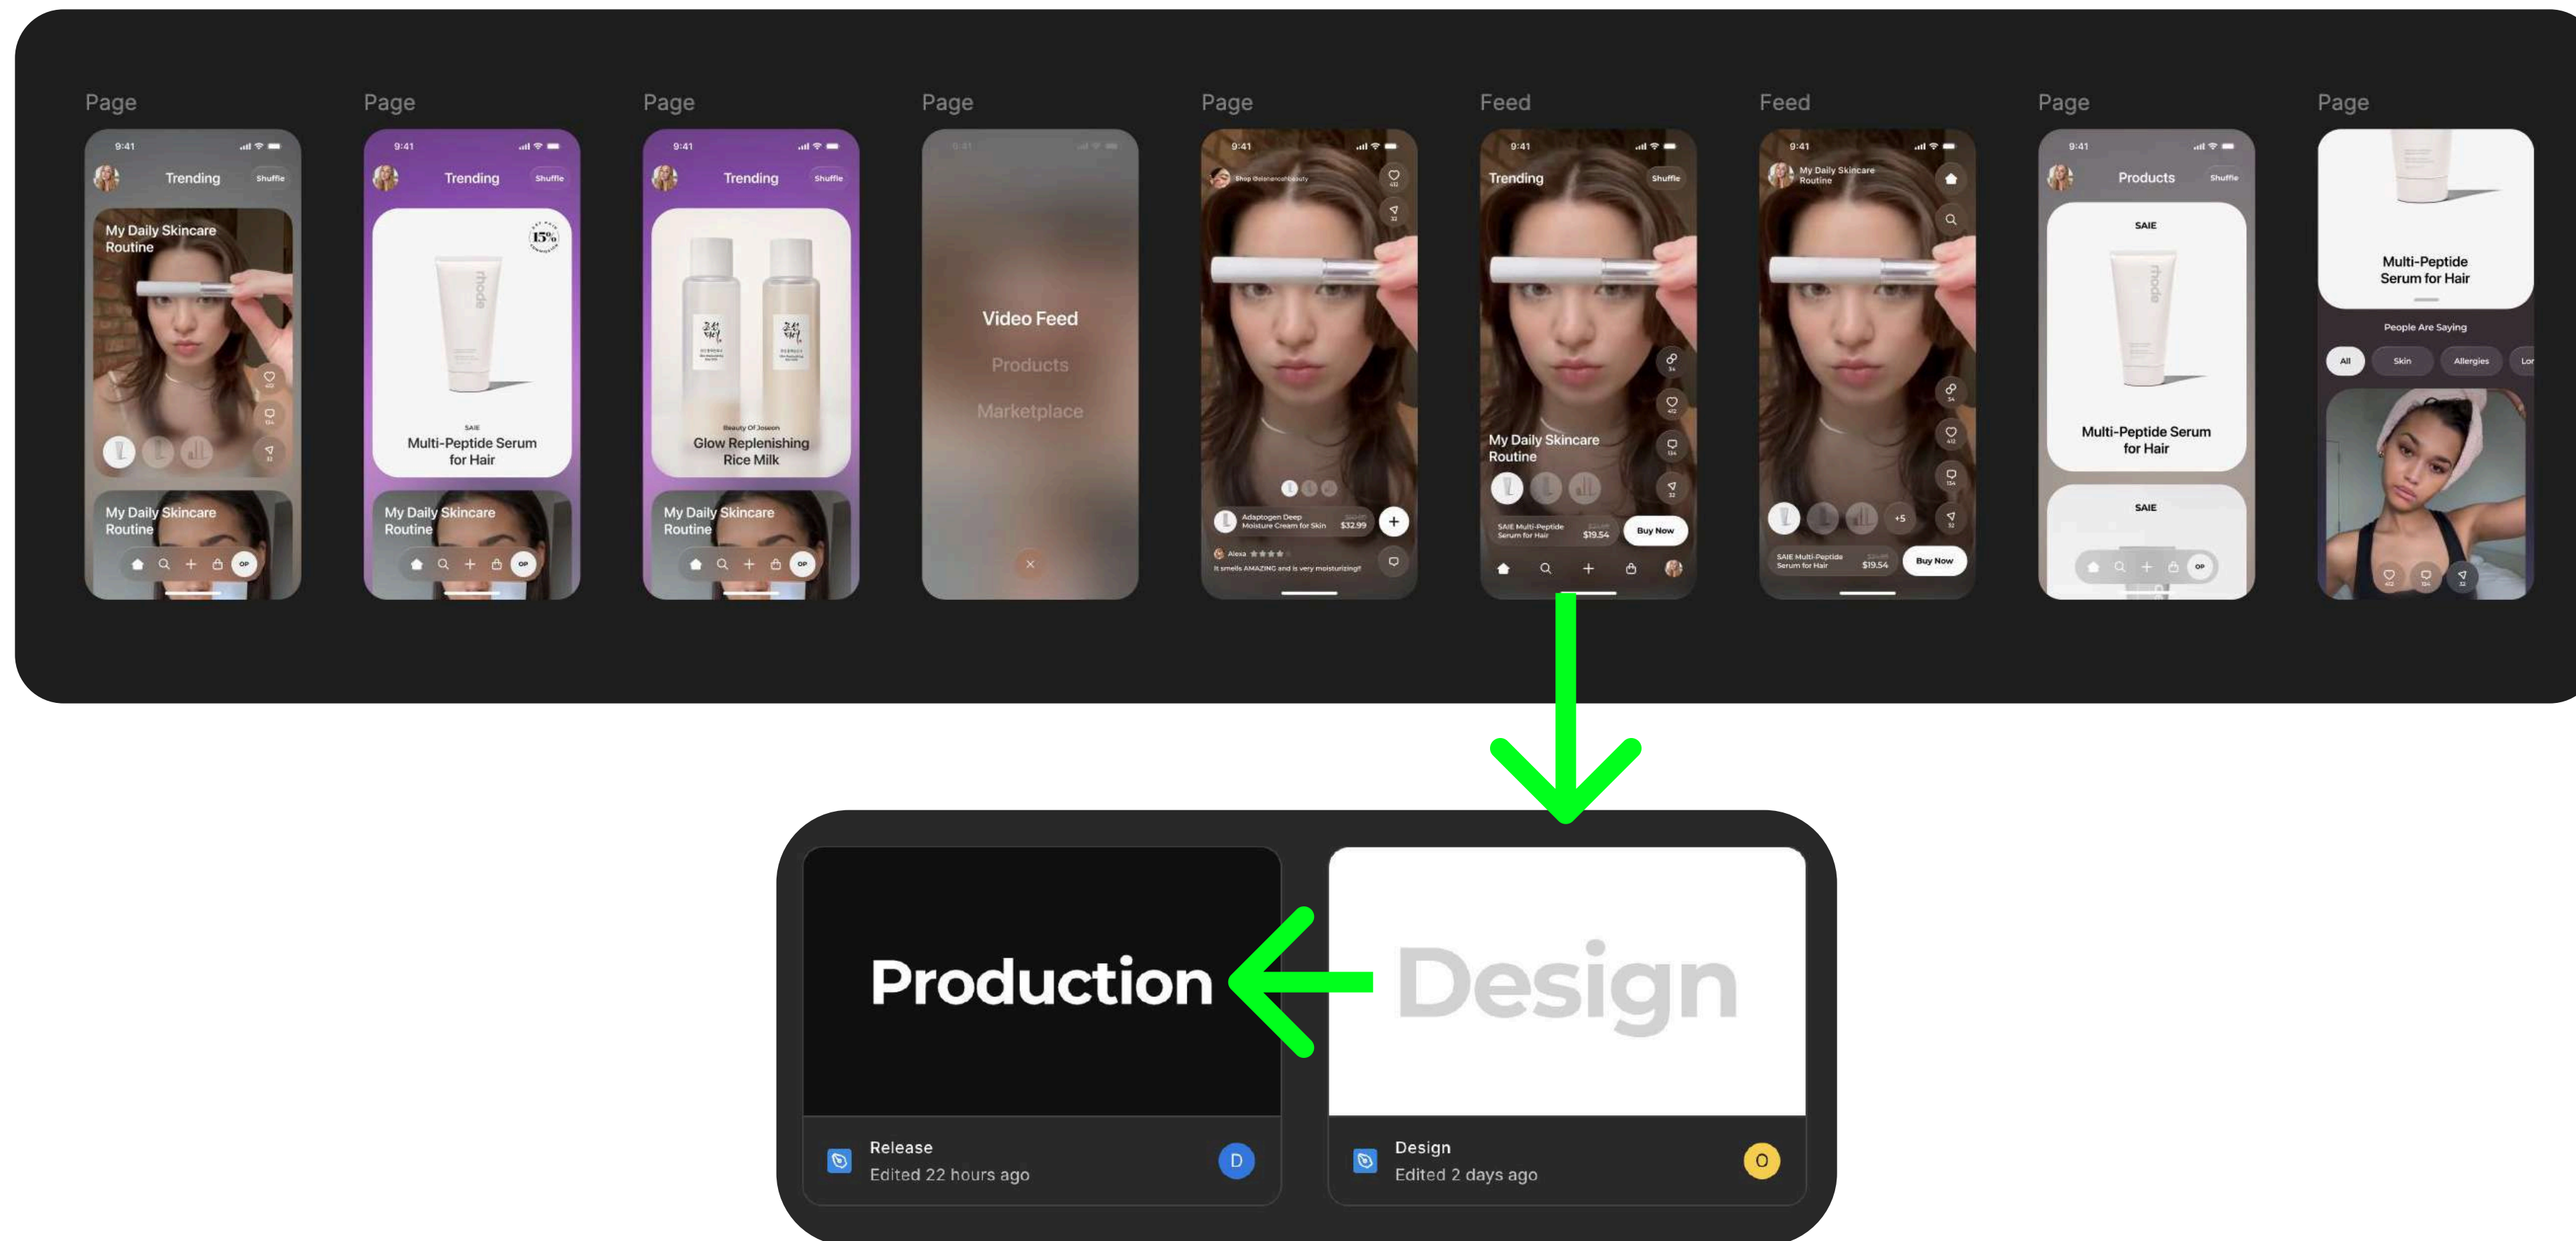

Design Phase

4. RESEARCH, INFORMATION ARCHITECTURE AND UX IMPROVEMENTS AREA

Design creates feature-driven concepts while identifying and recommending UX enhancement areas for navigation and information architecture review, leveraging competitor research, industry trends, market solutions, and accumulated knowledge.

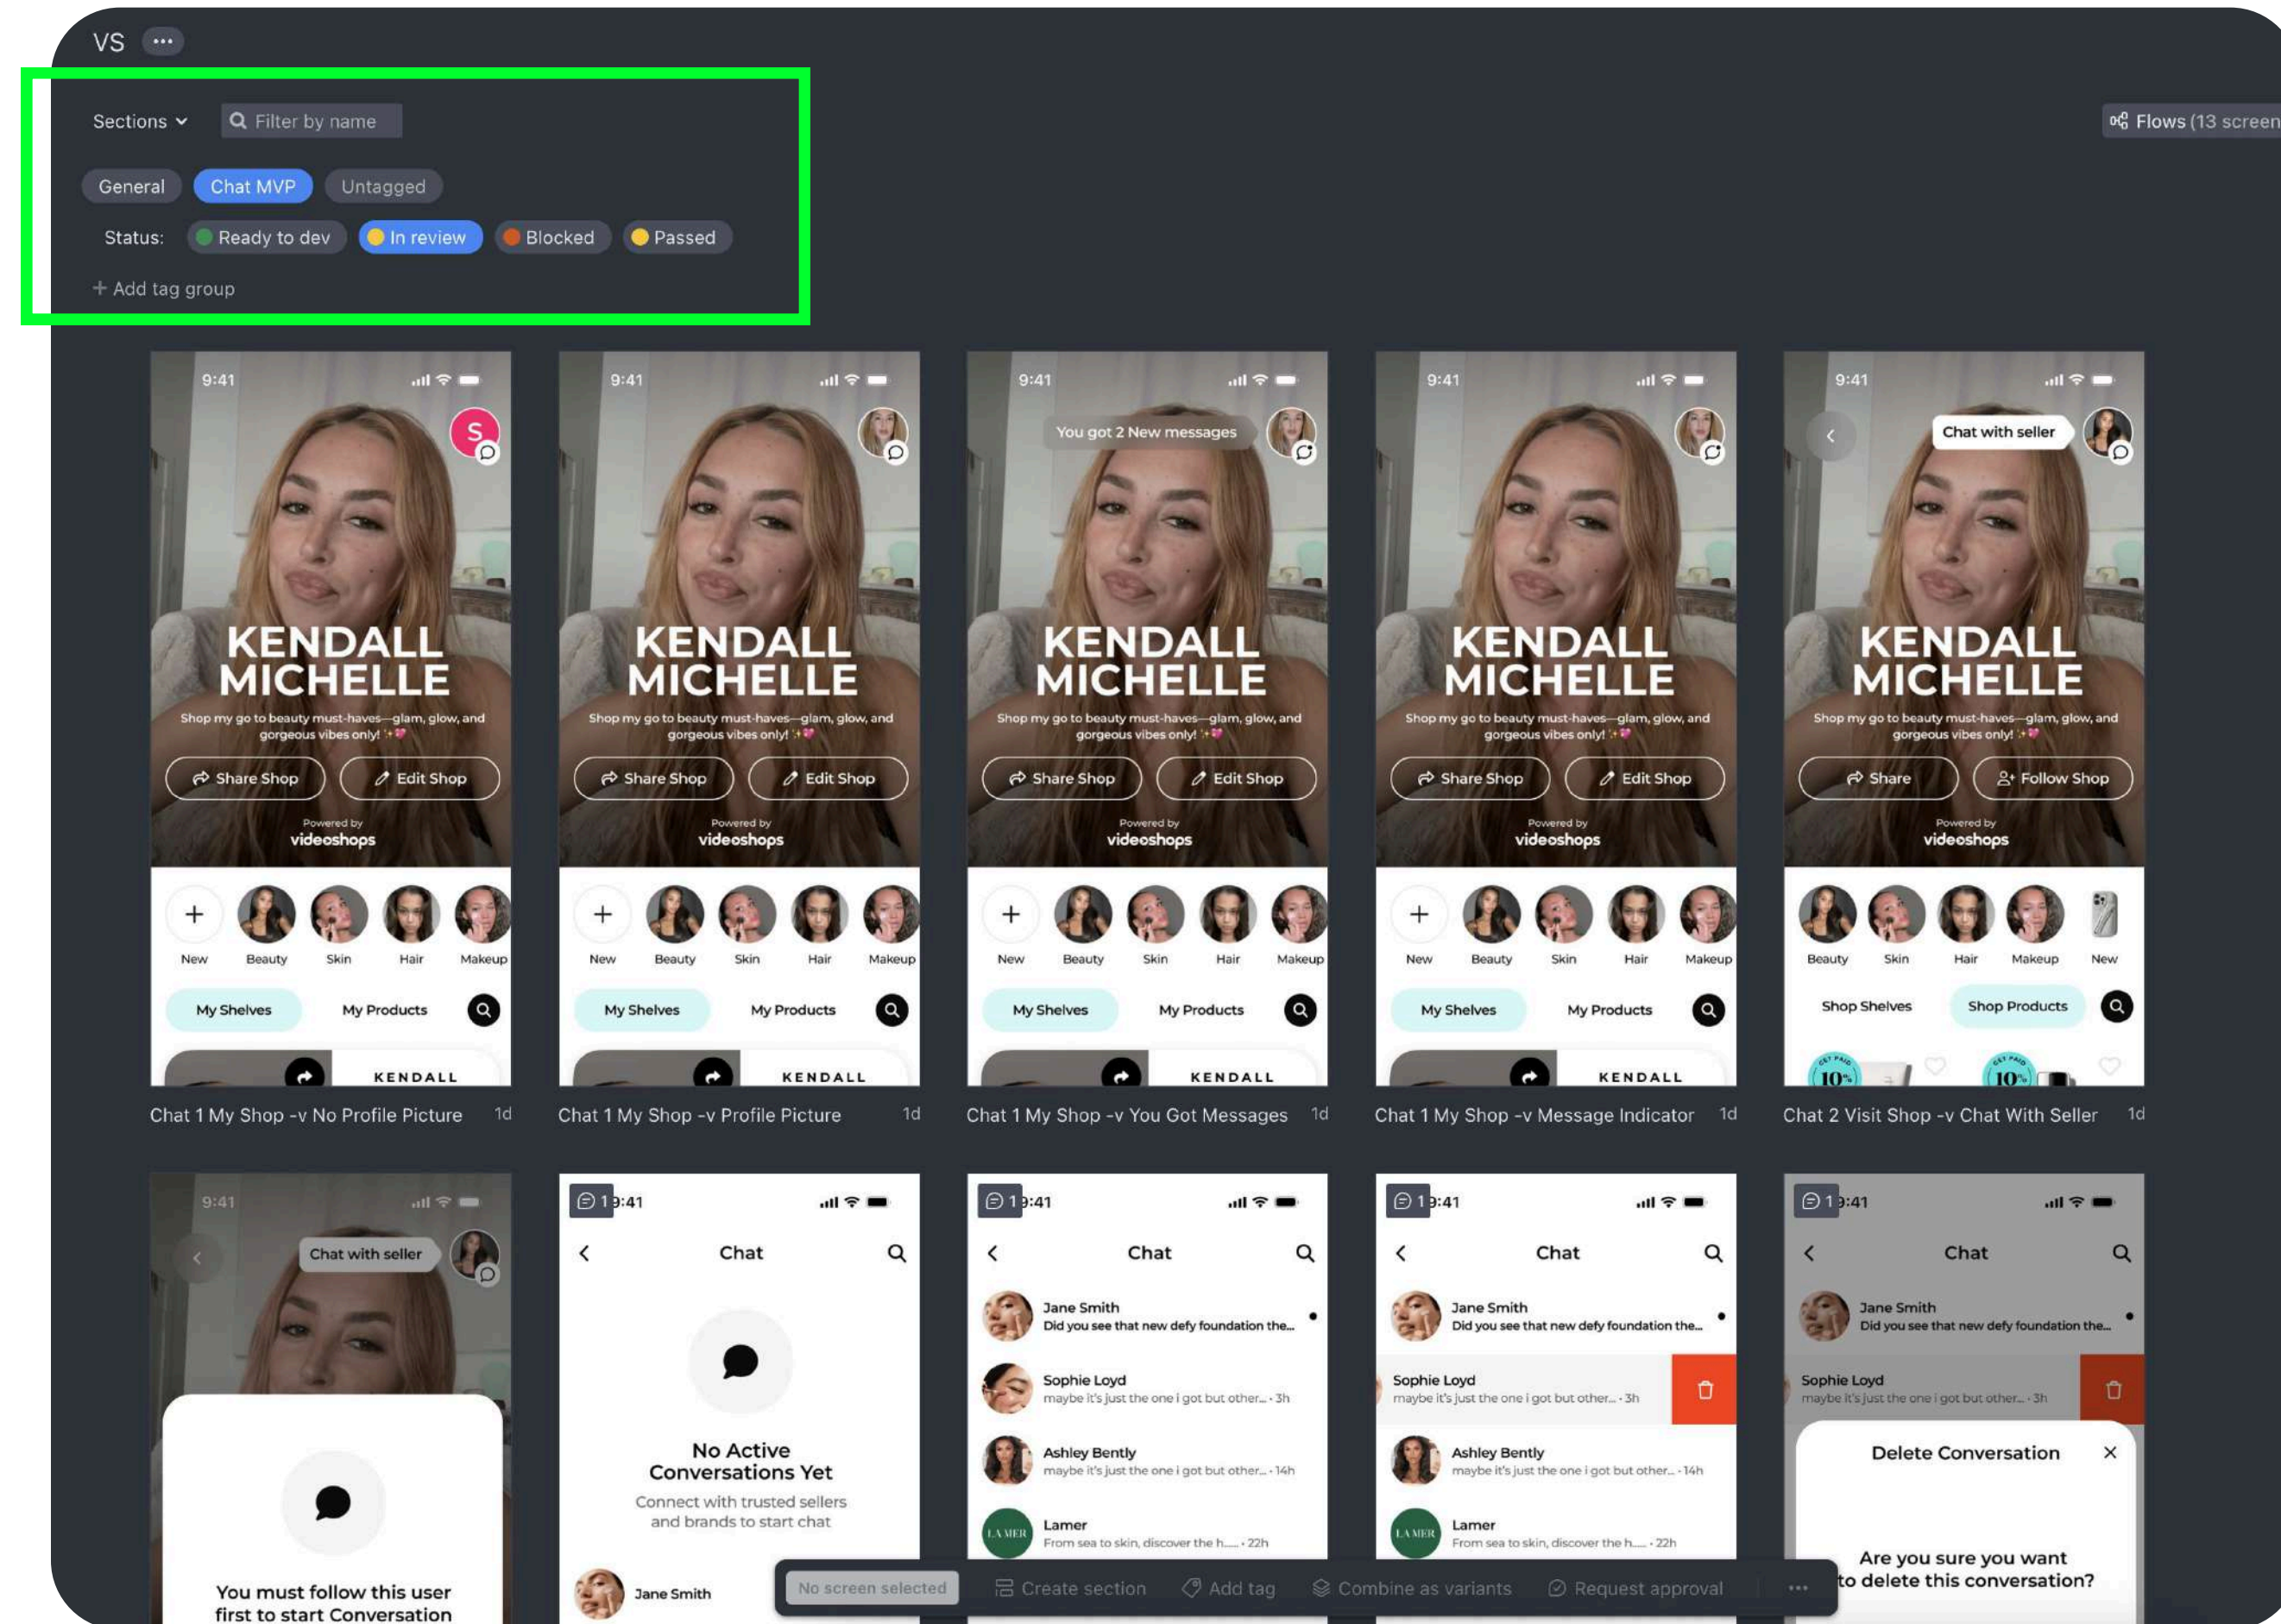

5. CONCEPTS AND VERSION CONTROL

Draft concepts are developed and refined within design files before advancing to "Release" status for handoff. Release functions as a version control system for design team-approved assets only, while Zeplin serves as the management interface for oversight, feedback collection, status tracking, and comprehensive version documentation.

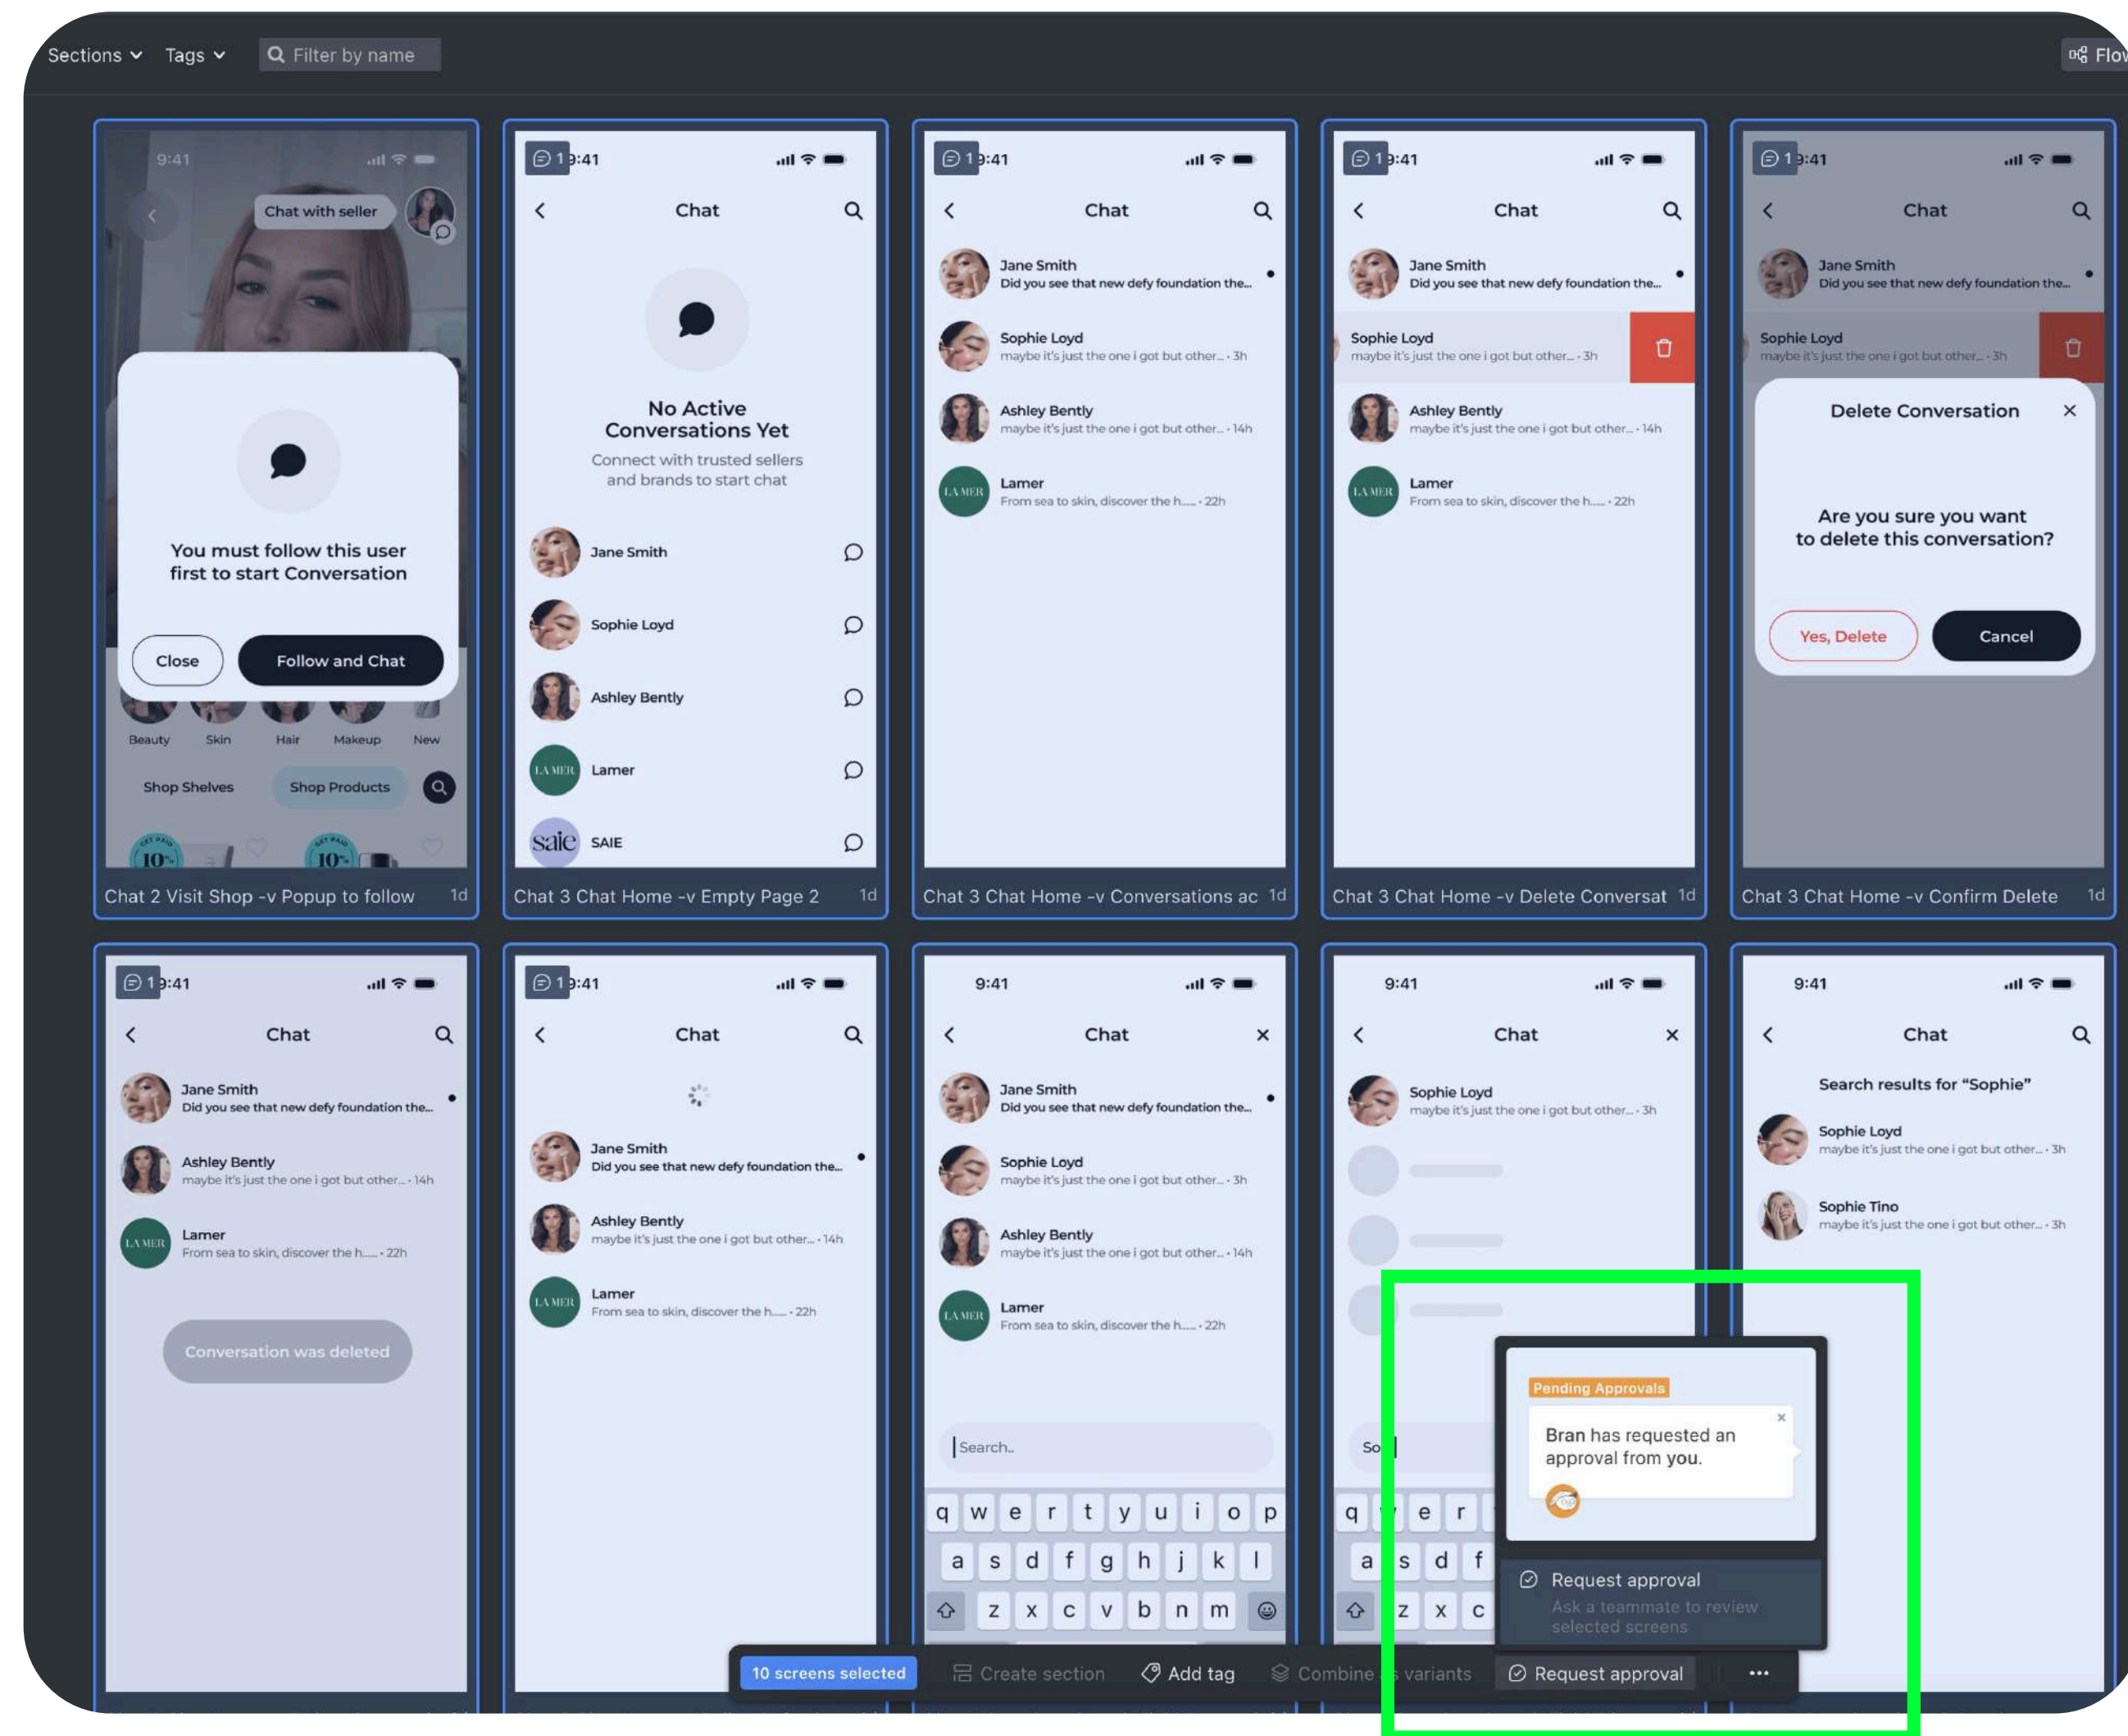

Delivery Phase

6. ZEPLIN

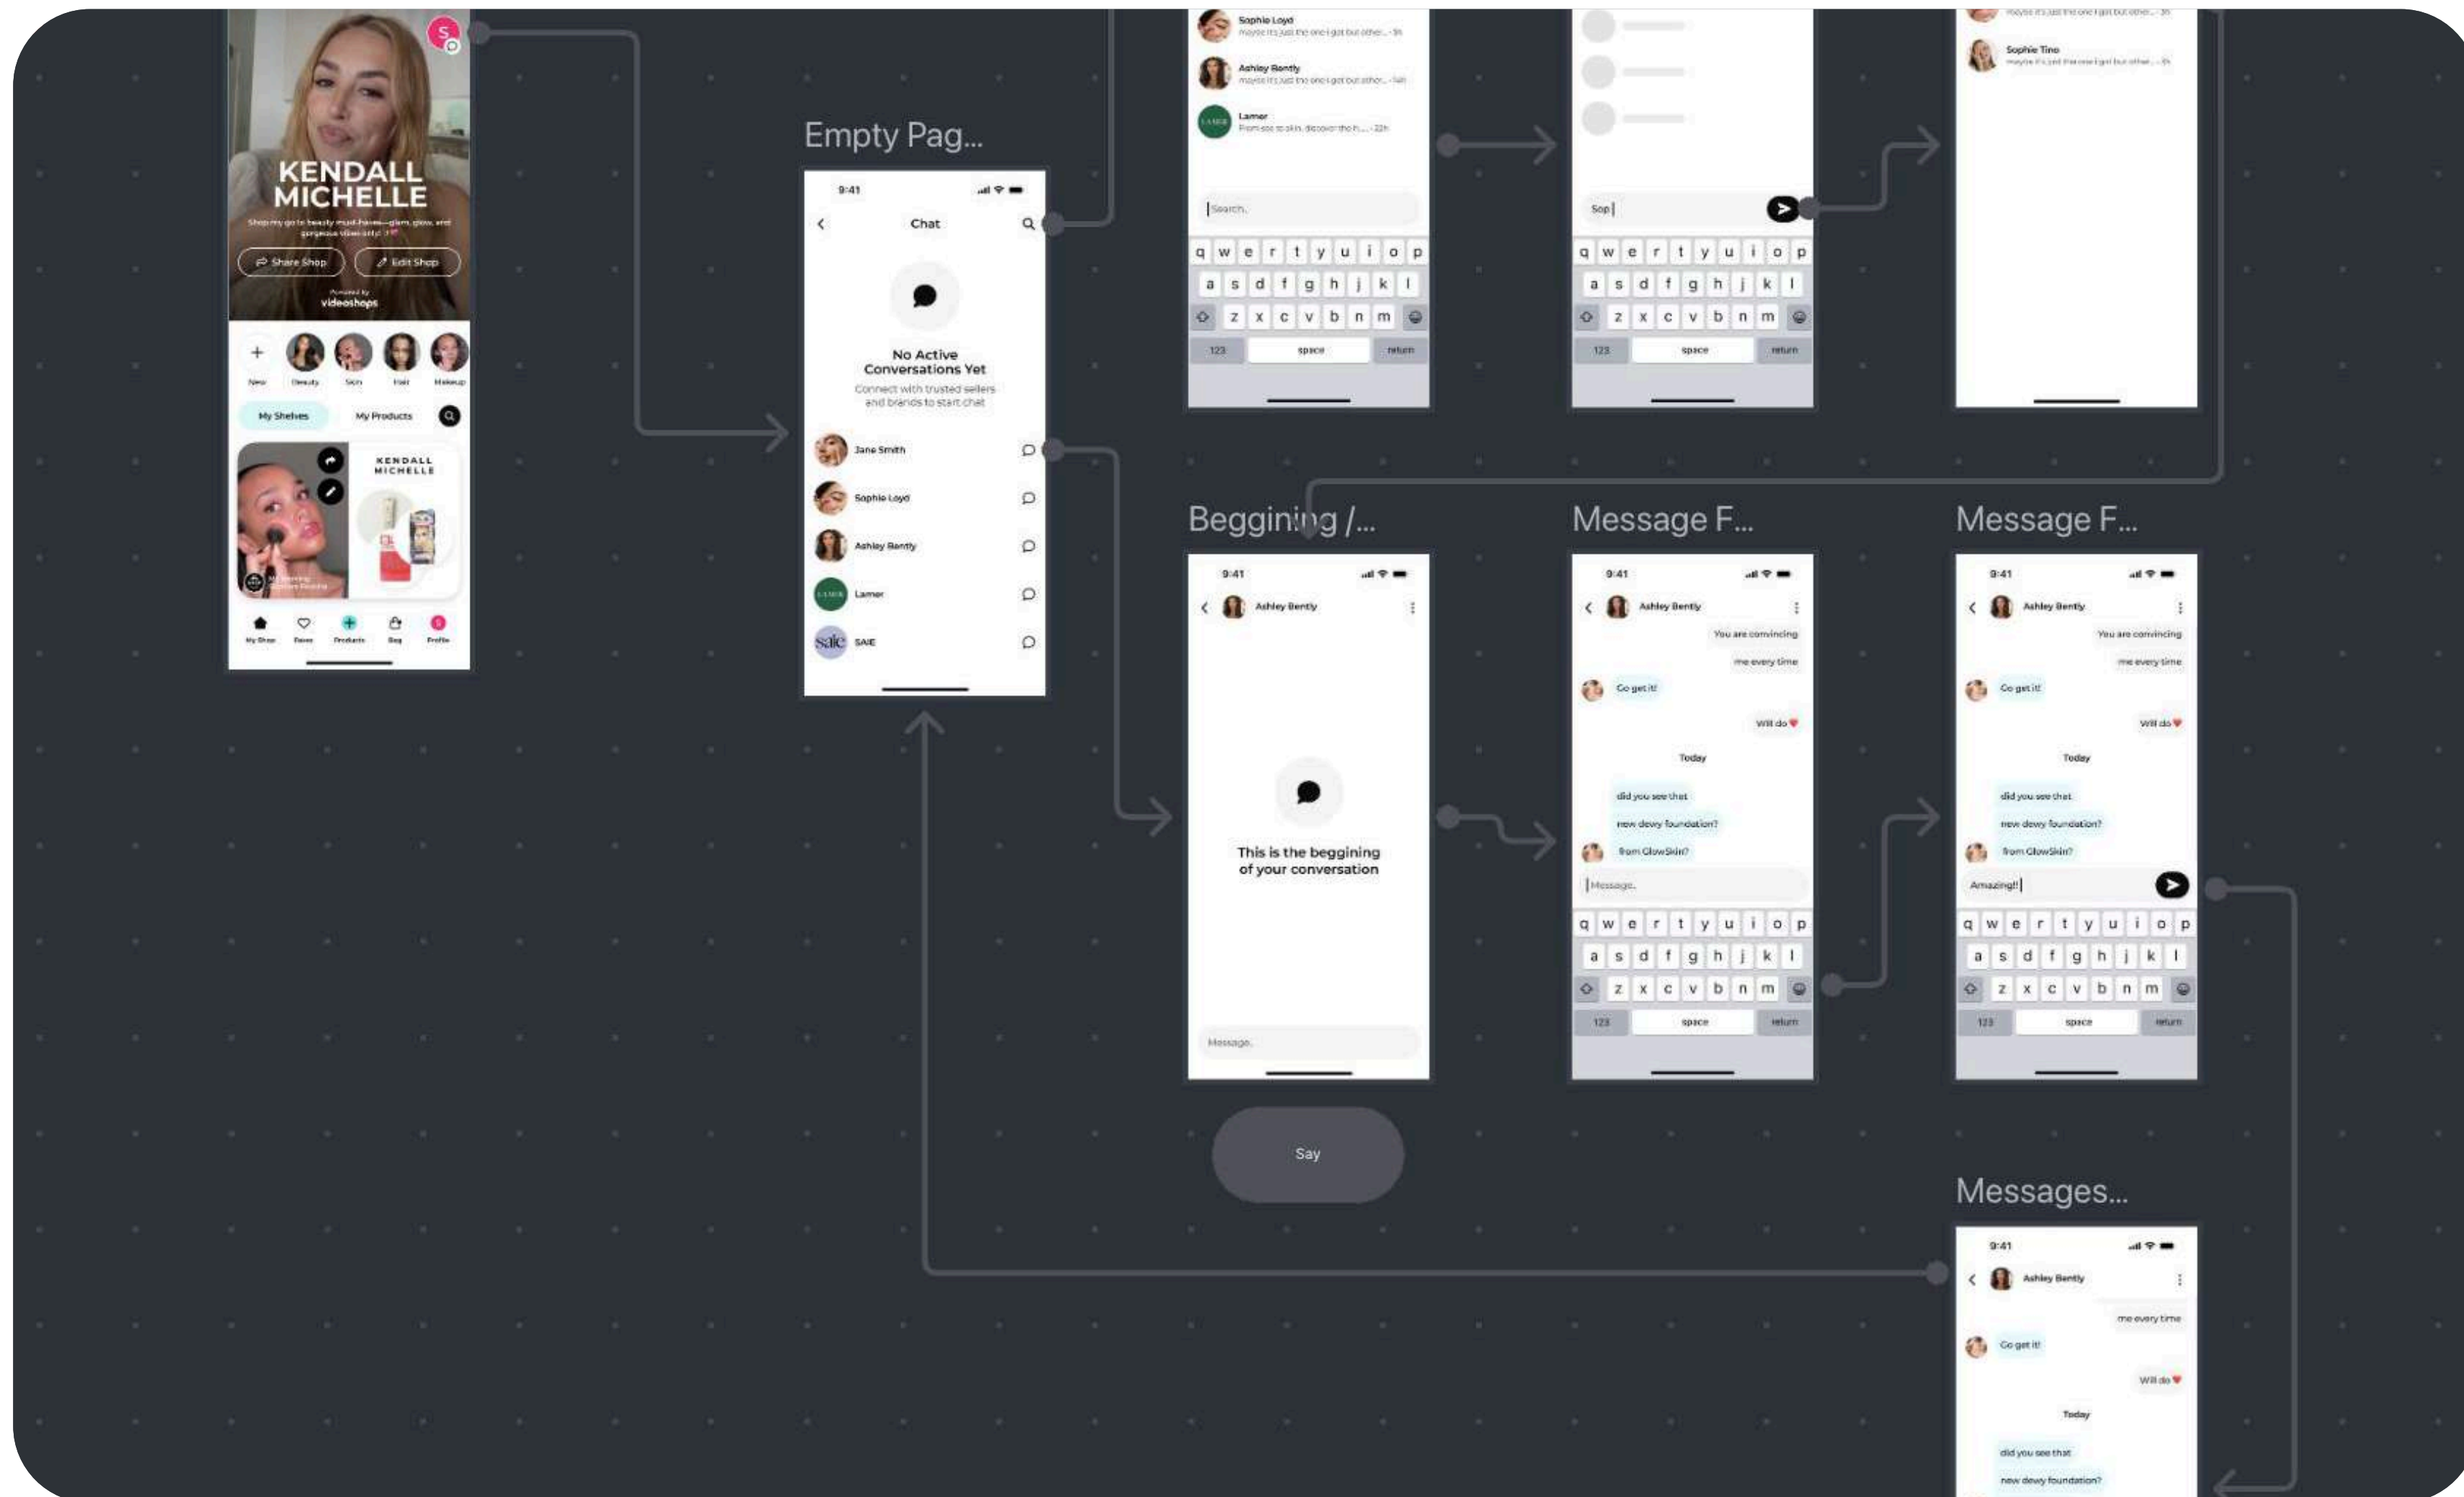

Exported pages are organized in Zeplin by product category, development status, or state groupings, such as "Chat-MVP-In Review."

7. Review Requests

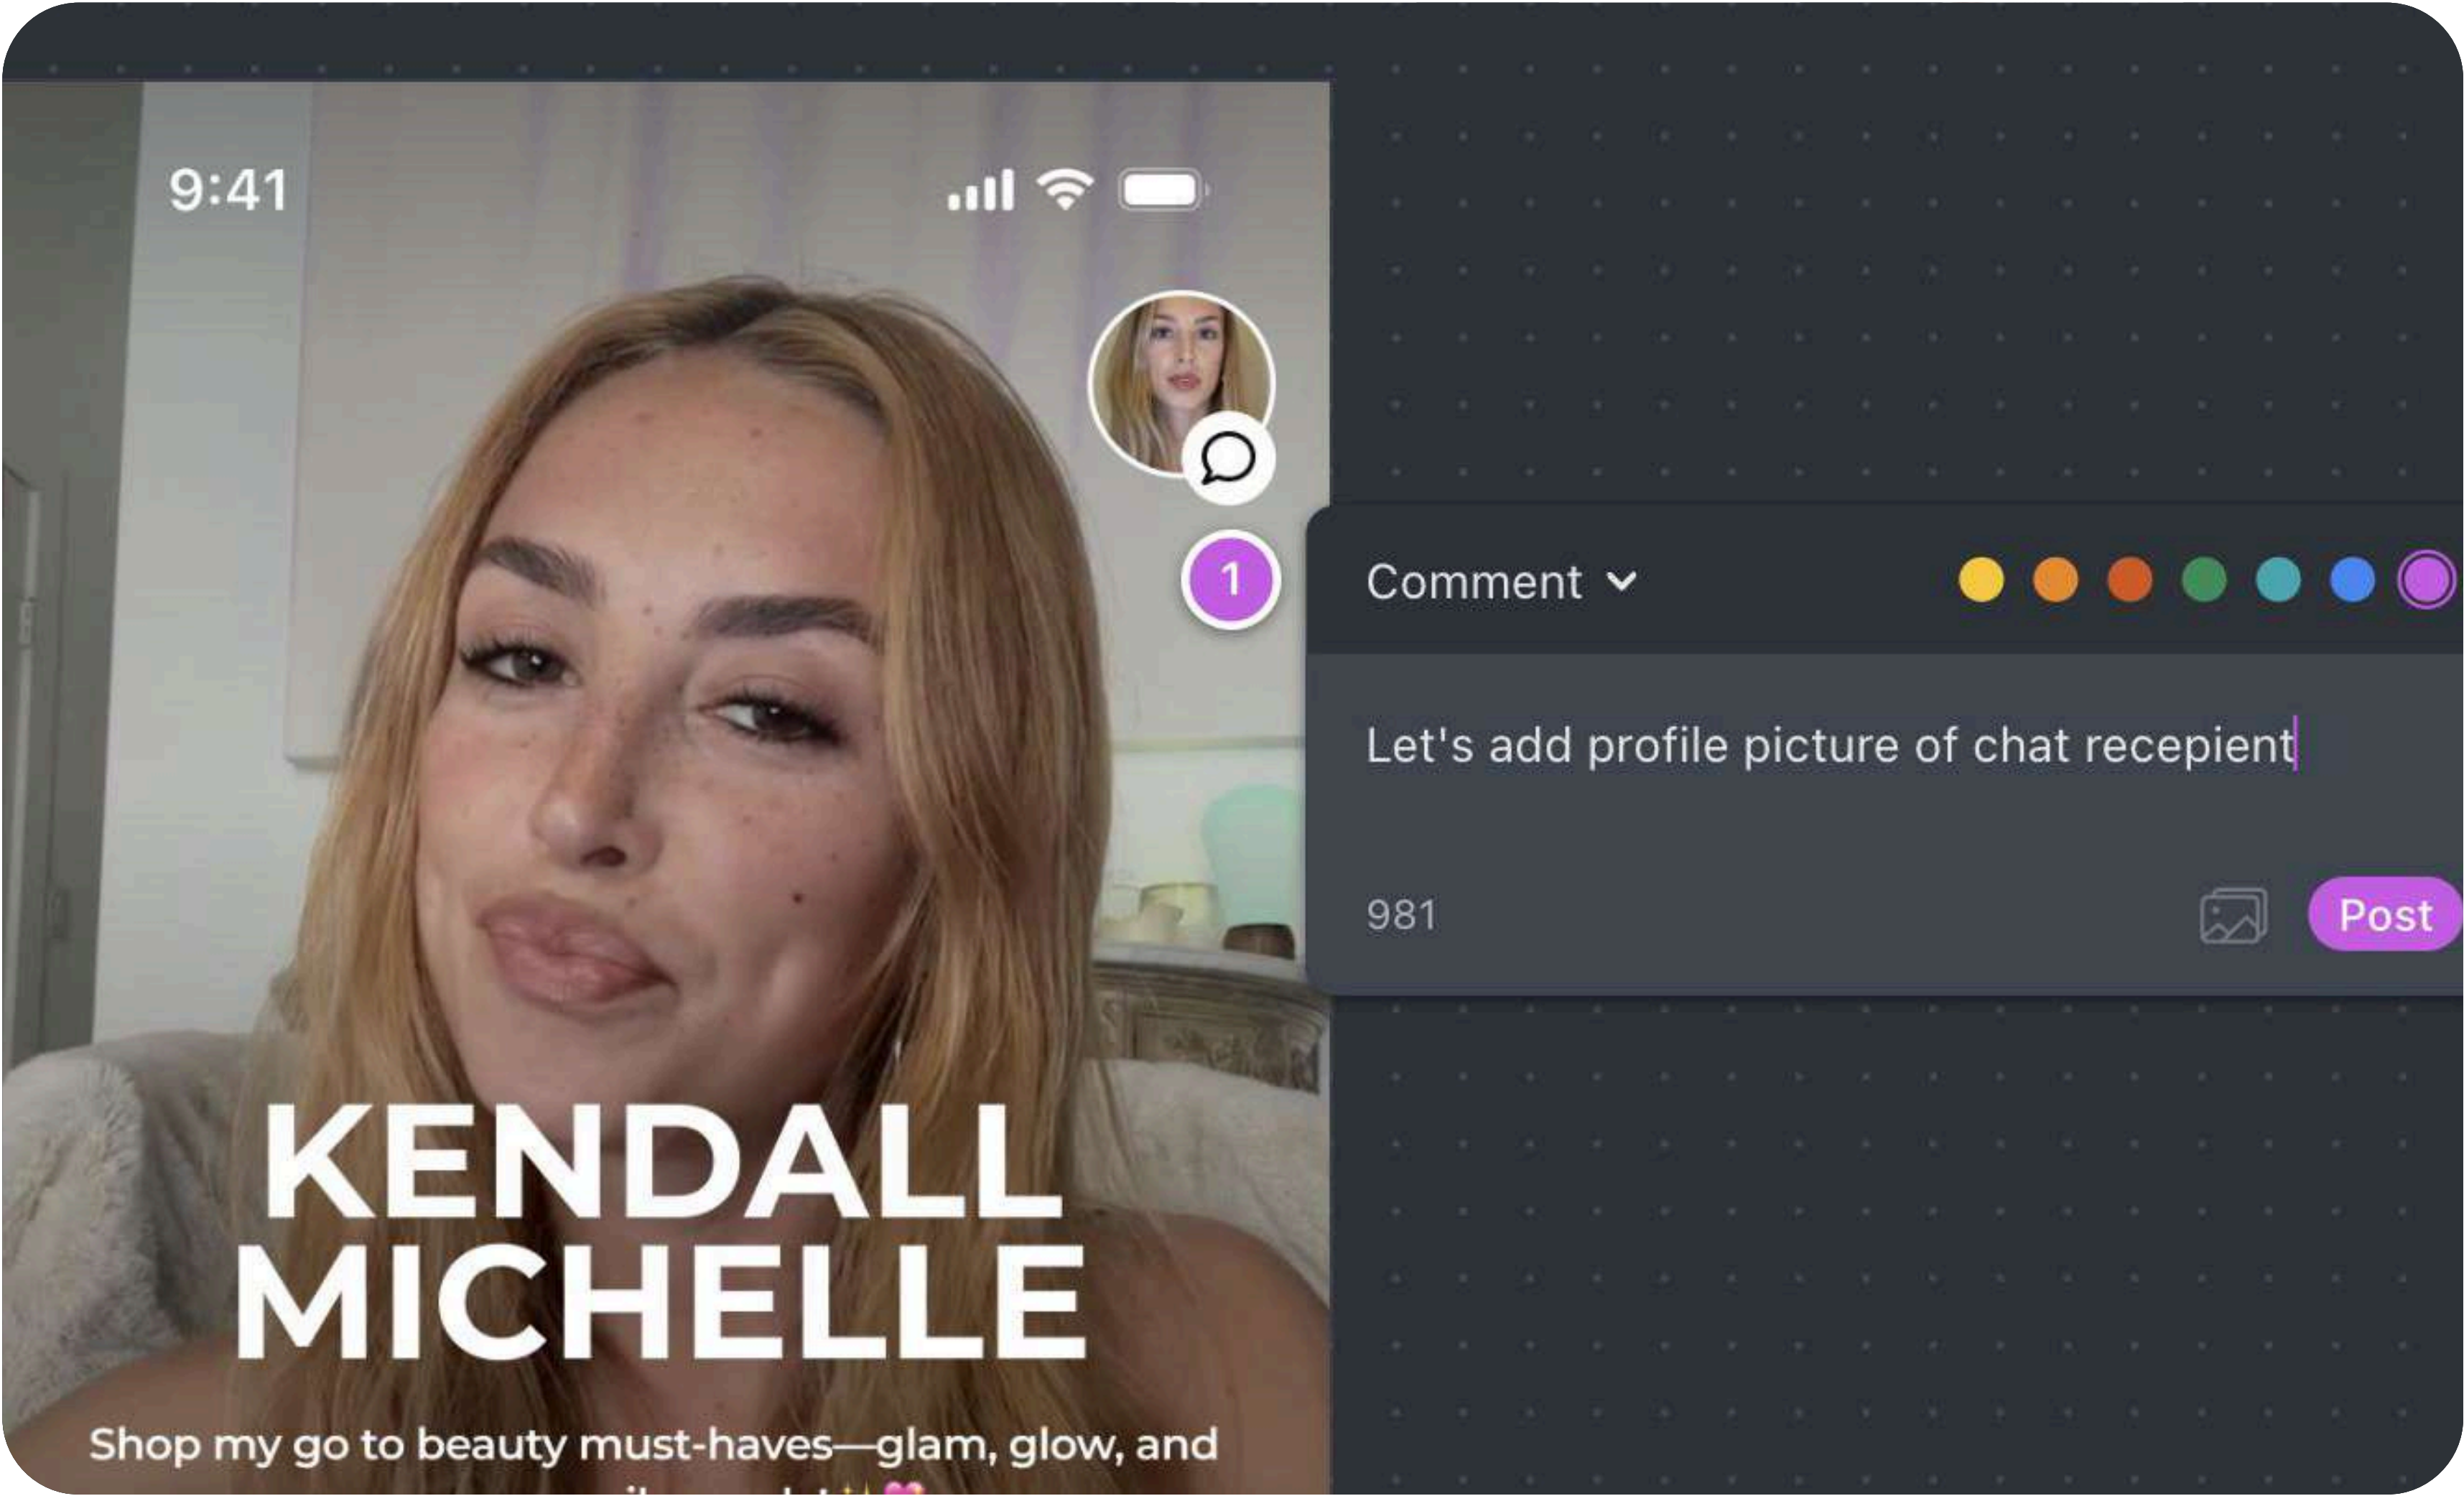

Before moving to development stage, changes or new concepts are requested to be approved by management or person assigned to the task.

8. Prototypes

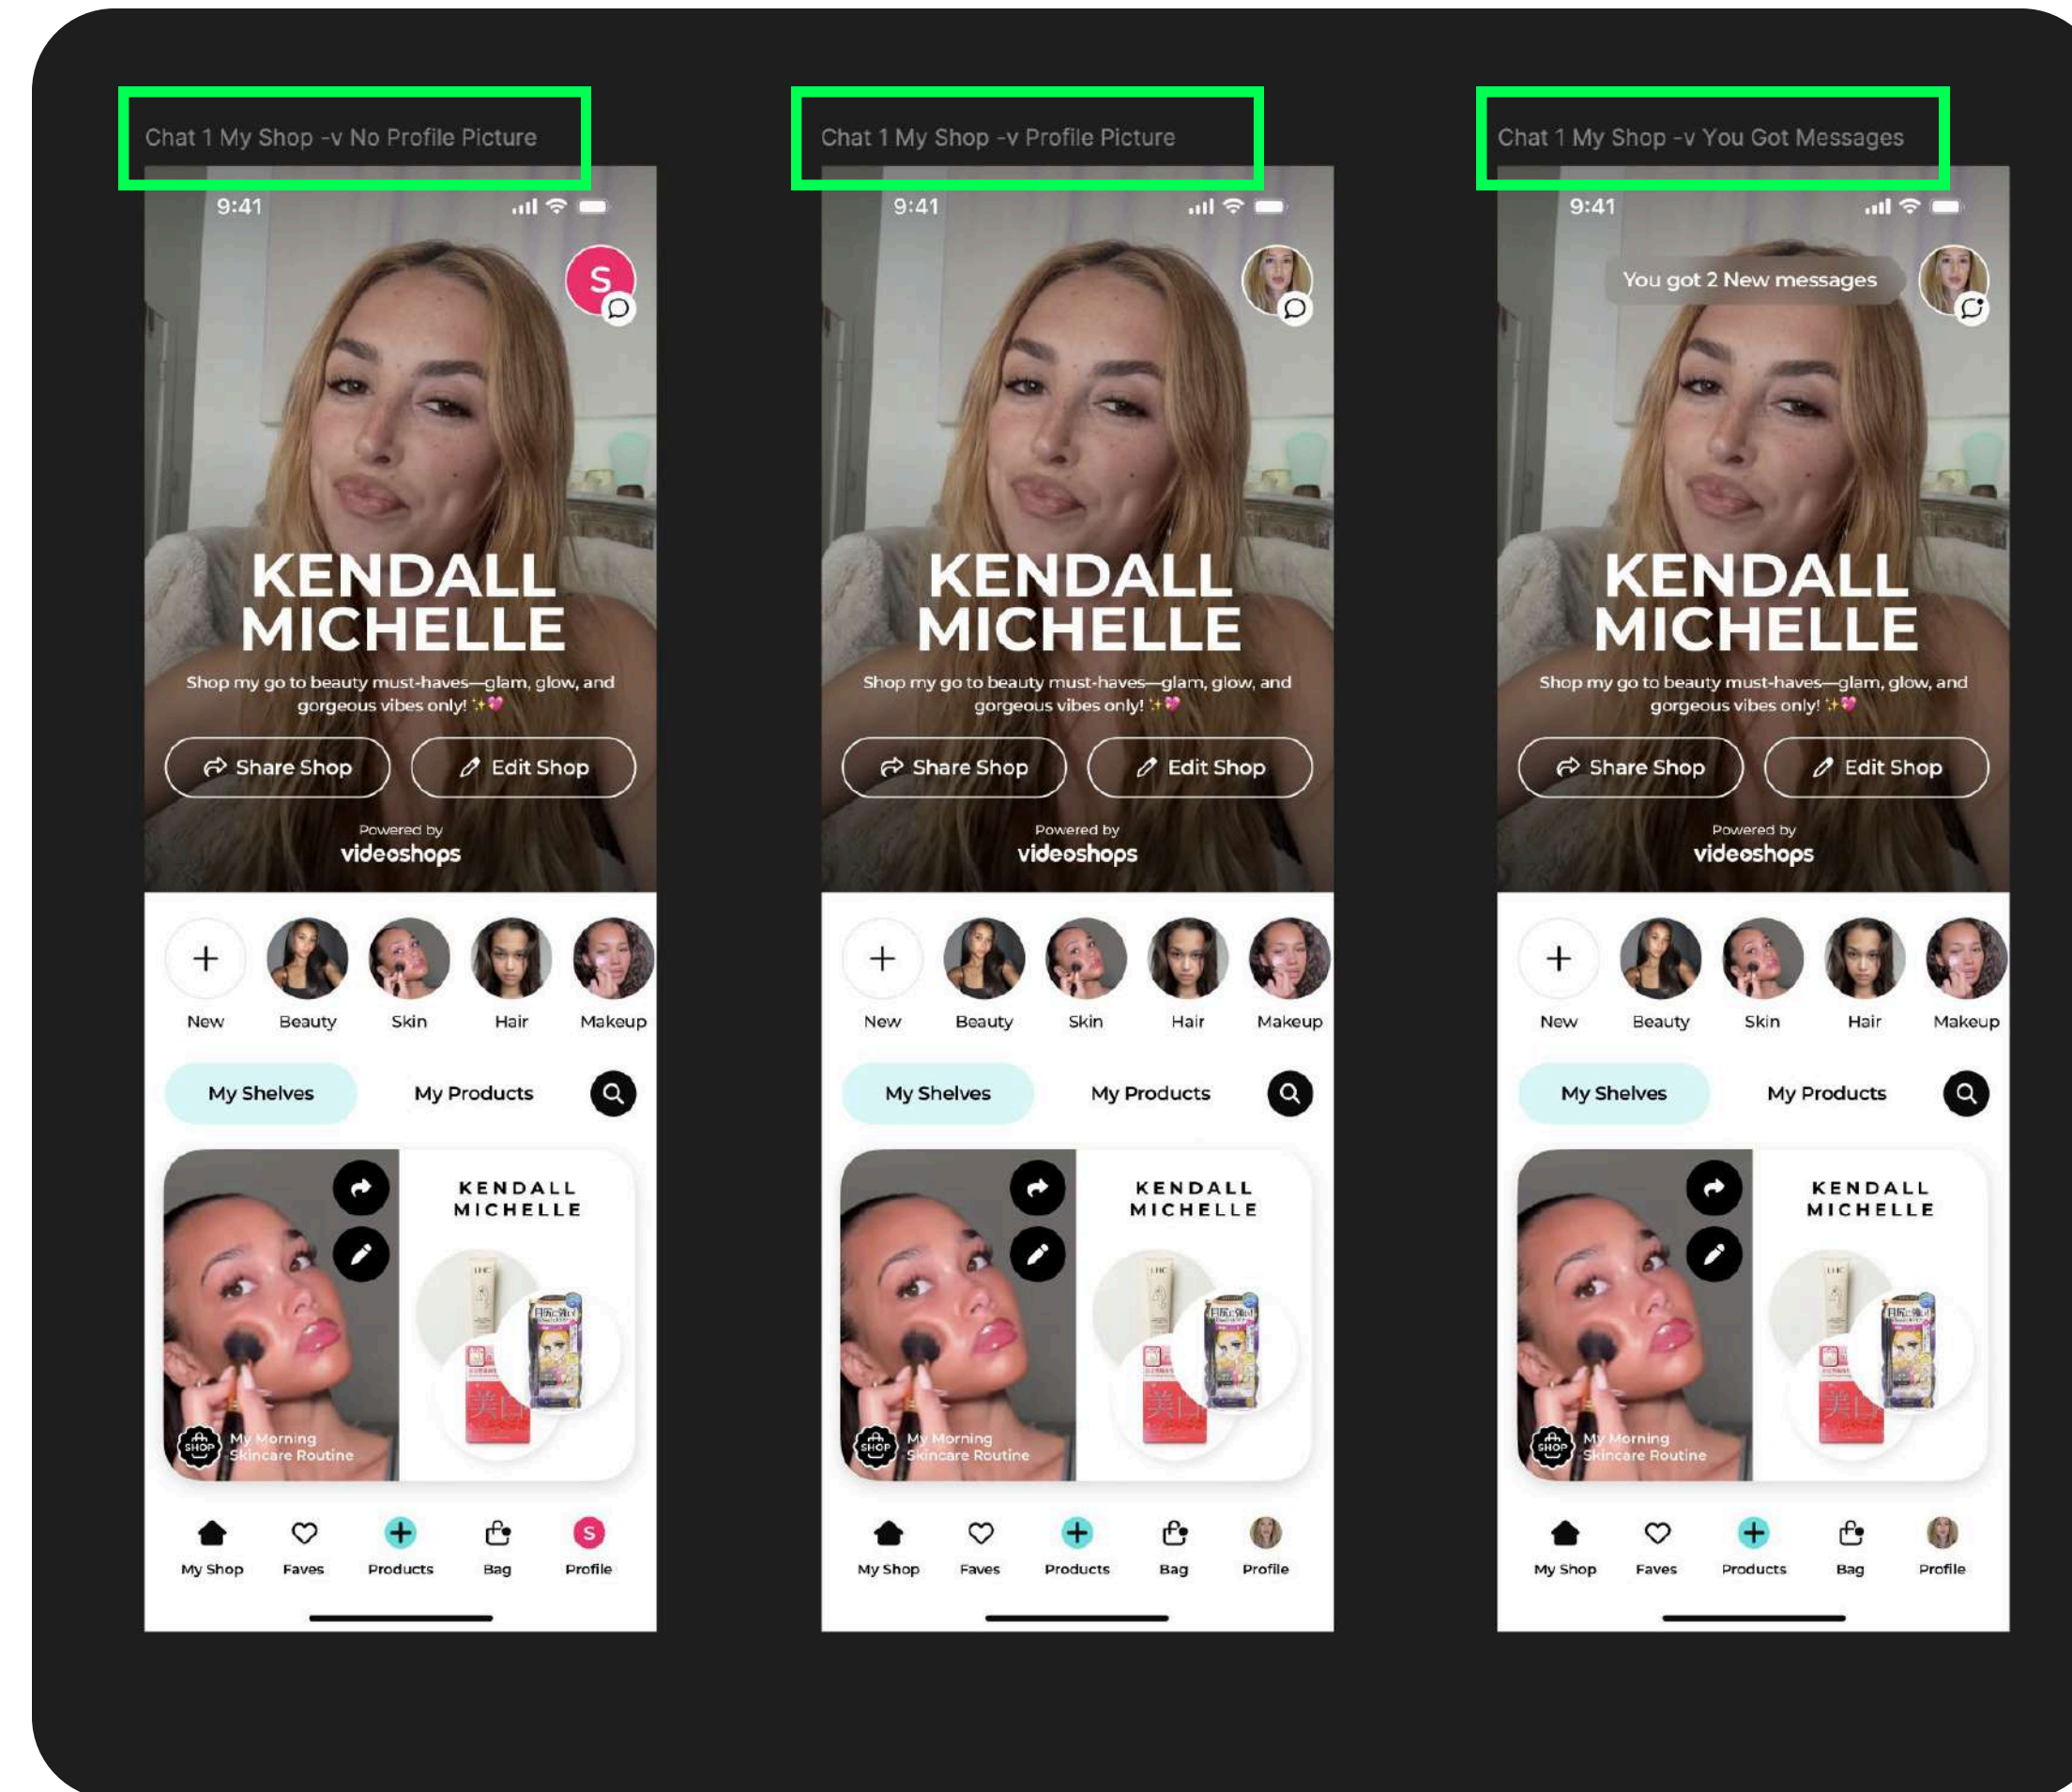

Zeplin provides flows and prototype systems for better comprehension and in depth analysis of product experience.

9. Comments and Communication

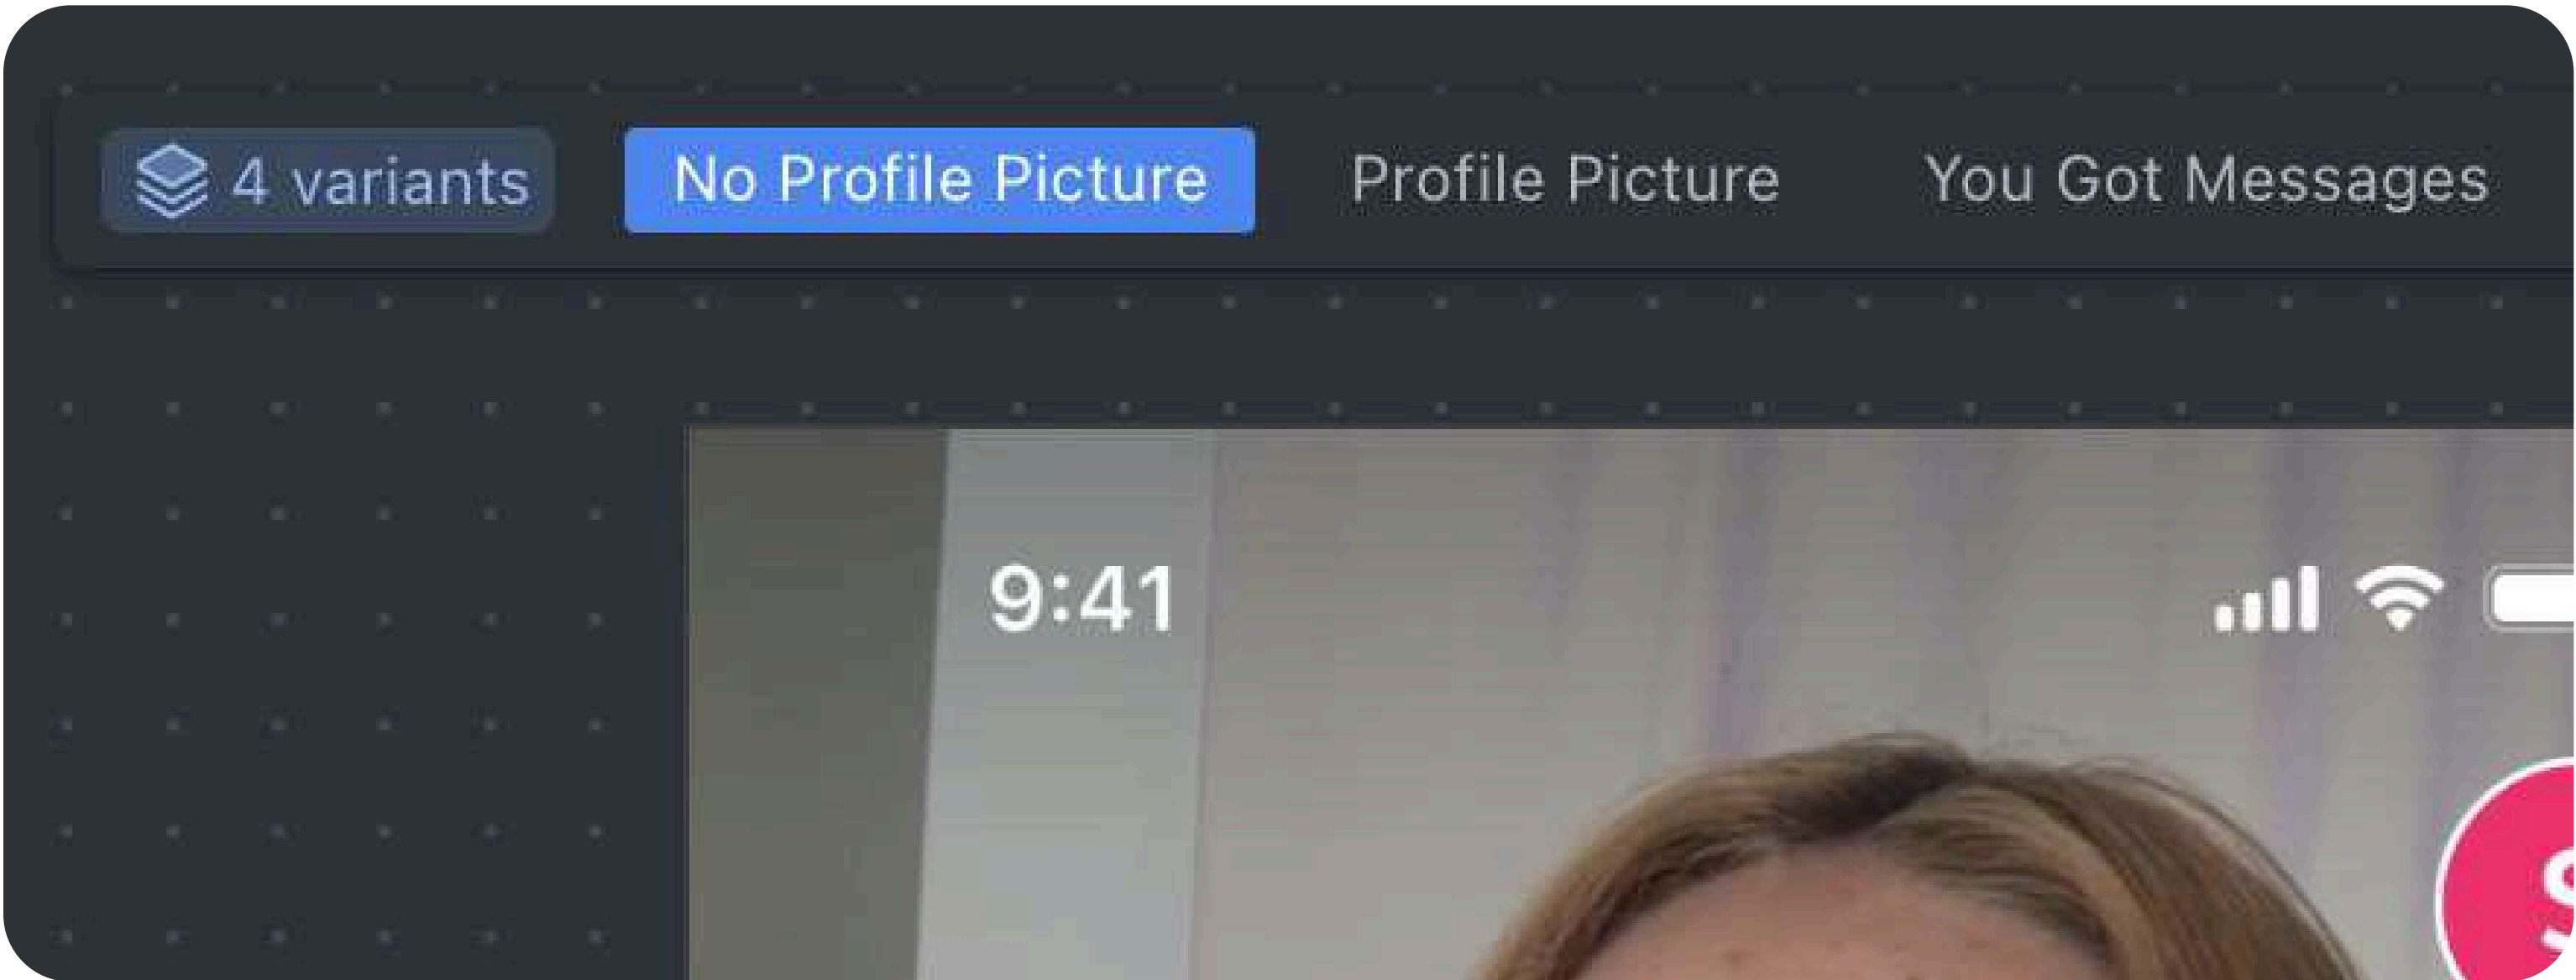

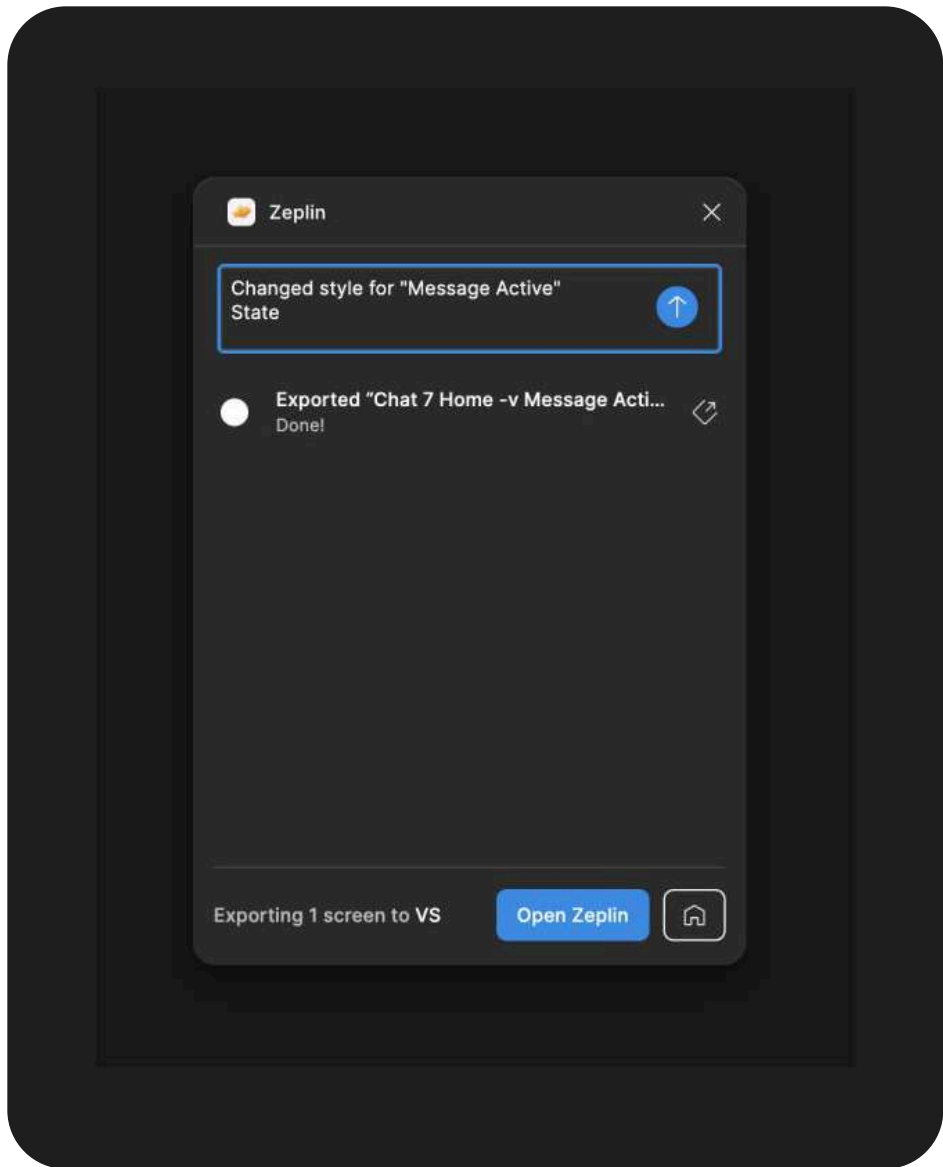

Team members are able to comment inside of zeplin of specific version and review designs for iterations.

10. Exporting in Zeplin

Names are structured in the following order: product name “Chat”, followed by a numerical index (e.g., “#1”), then the state (e.g., “My Shop”), and finally the version (e.g., “No Profile Picture” or “You Got the Message”, etc.).

11. Versions and commit messages

Changes are published via zeplin plugin with commit message describing what's changed.
Variants are displayed inside of group based on naming provided from Figma

Thank you!
